The art of precise placement.
Tried, True & BLUE

- Easy placement and rinsing—distinctive blue color enhances placement and ensures complete removal.
- Ideal viscosity—ensures precise placement without migrating, even on vertical surfaces.
- Enhanced capillary action—penetrates the smallest fissures on occlusal surfaces.
- Peace of mind—unique self-limiting chemistry reduces the risk of overetching, creating the optimal surface to receive resin.

Clinical experience and FE-SEM evaluations¹ show that 15 seconds etch time on both dentin and cut enamel provides optimal conditioning of both tissues. Air/water rinse. Blot excess water off, leaving surface visibly wet.

Ultra-Etch phosphoric acid is proven to be uniquely self-limiting in its depth of etch, with an average depth of 1.9 µm using 15-second etch. Liquid phosphoric acid (37%) showed an average of 5.0 µm at 20 seconds, and a competing “polymer thickened” etchant a 4.8 µm depth. Acids with this greater depth of etch go beyond the optimum level and increase the potential for incomplete resin impregnation.

*Volume discounts available at three and five

---

163 Ultra-Etch Kit
- 4 x 1.2 ml syringes
- 20 x Blue Micro tips

164 Ultra-Etch Refill
- 4 x 1.2 ml syringes

167 Ultra-Etch Econo Kit
- 20 x 1.2 ml syringes
- 40 x Blue Micro tips

168 Ultra-Etch Econo Refill
- 20 x 1.2 ml syringes

383 Ultra-Etch IndiSpense™ Kit
- 1 x 30 ml IndiSpense syringe
- 20 x Blue Micro tips
- 20 x 1.2 ml empty syringes

1407 Ultra-Etch Econo Refill
- 50 x 1.2 ml syringes

685 Ultra-Etch IndiSpense™ Syringe
- 1 x 30 ml IndiSpense syringe
