the 1990s, the number of people with a disability in the United States has increased by 25% (U.S. Census Bureau 2000).

As a result of the increase in the number of people with disabilities, the need for accessible information has become more acute. The National Center for Accessible Information (NCAI) has estimated that 10% of the population has a disability that affects their ability to access information (NCAI 2000).

One of the most significant barriers to accessible information is the lack of accessible electronic information resources.

The purpose of this study was to investigate the barriers to accessible electronic information resources for people with disabilities.

The study was conducted in a large, urban, public library system in the United States.

of the model, the model is not able to explain the observed data. The model is rejected.

When the model is rejected, the researcher is forced to consider alternative models. The researcher may choose to modify the existing model or to develop a new model. The researcher may also choose to collect more data to test the model.

The model is accepted if the model is able to explain the observed data. The model is not rejected.

The model is rejected if the model is not able to explain the observed data. The model is not accepted.

The model is accepted if the model is able to explain the observed data. The model is not rejected.

The model is rejected if the model is not able to explain the observed data. The model is not accepted.

The model is accepted if the model is able to explain the observed data. The model is not rejected.
