the 1990s, the number of people in the world who are living in poverty has increased from 1.1 billion to 1.5 billion (World Bank 2000).

There are a number of reasons for this increase. One of the main reasons is the rapid population growth in the developing countries. The population of the world is expected to reach 8 billion by the year 2025 (United Nations 2000). This increase in population will put a tremendous pressure on the world's resources, particularly in the developing countries. Another reason is the increasing inequality in the distribution of income and wealth. The rich countries are becoming richer, while the poor countries are becoming poorer (World Bank 2000).

There are a number of ways in which the world can reduce poverty. One way is to increase the rate of economic growth in the developing countries. This can be done by increasing investment in infrastructure, education, and health care. Another way is to improve the distribution of income and wealth. This can be done by increasing the minimum wage, providing social security, and increasing the progressivity of the tax system (World Bank 2000).

There are a number of challenges that the world faces in reducing poverty. One challenge is the increasing inequality in the distribution of income and wealth. Another challenge is the rapid population growth in the developing countries. A third challenge is the increasing inequality in the distribution of income and wealth. A fourth challenge is the increasing inequality in the distribution of income and wealth (World Bank 2000).

There are a number of ways in which the world can overcome these challenges. One way is to increase the rate of economic growth in the developing countries. Another way is to improve the distribution of income and wealth. A third way is to increase investment in infrastructure, education, and health care. A fourth way is to increase the progressivity of the tax system (World Bank 2000).
