the 1990s, the number of people in the world who are undernourished has increased from 600 million to 800 million.

There are a number of reasons why the world's population is still hungry. First, the world's population is growing rapidly. In 1990, the world's population was 5.3 billion. By 2000, it had grown to 6.1 billion. By 2010, it is expected to reach 7.1 billion. This rapid population growth is putting a strain on the world's food resources. Second, the world's food resources are being used inefficiently. A large amount of food is wasted at every stage of the food chain, from production to consumption. Third, the world's food resources are being used in a way that is not sustainable. The world's food resources are being used in a way that is not sustainable.

There are a number of ways in which the world's food resources can be used more efficiently and sustainably. First, the world's food resources can be used more efficiently by reducing food waste. Second, the world's food resources can be used more sustainably by using sustainable farming practices. Third, the world's food resources can be used more sustainably by using sustainable fishing practices.

There are a number of ways in which the world's food resources can be used more efficiently and sustainably. First, the world's food resources can be used more efficiently by reducing food waste. Second, the world's food resources can be used more sustainably by using sustainable farming practices. Third, the world's food resources can be used more sustainably by using sustainable fishing practices.

There are a number of ways in which the world's food resources can be used more efficiently and sustainably. First, the world's food resources can be used more efficiently by reducing food waste.
