

Spot UV Manual.

without hassle.

Spot UV allows part of your product to have a glossy finish. This creates a very cool effect! The area where you want this spot UV coating will have to be provided to us in 100% black in a separate page or document.

Result:

The diamond and text have a cool glossy effect.

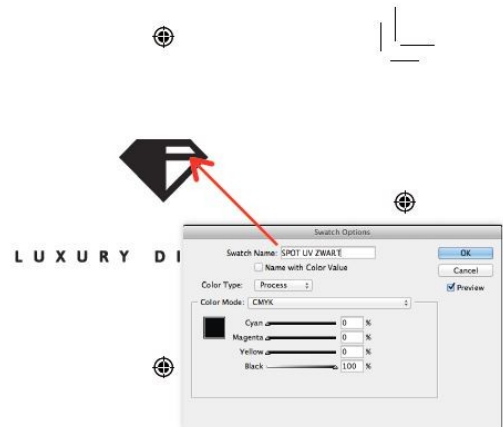

Page 1: Your design.

This is the page which shows your design without any extra finishes. In the example we've chosen an image of a diamond with text which will be finished with Spot UV.

Page 2: Spot UV page with 100% black.

On the second page you'll show what has to be printed in Spot UV by making this black. **Tip:** You can also have more areas printed with Spot UV apart from what's seen in your design on page 1!

Do you want spot UV on both sides of your business card?

No problem! We can easily have both sides printed with Spot UV.

How? For each side that you want printed with Spot UV, you create an extra page which shows the areas that you want in Spot UV. Save all pages in one multiple-paged pdf file and upload this to your order.
