

Make your artwork print-ready

To smoothly transition from the design stage to printing, we have a simple guideline to help you!

1 Set up your file

To ensure that your artwork is as crisp and clear as possible, we recommend a **150 dpi resolution** for every design. We also have templates available to make it super easy, or you can also set up your document size according to your chosen format.

Bleed

This area will be trimmed. Ensure all background graphics or images cover this area.

Trim Line

This is the final size your artwork will be trimmed to.

Safety Margin

Avoid placing text or important details within this area in case of trimming inaccuracies.

2 Custom Size

If you need a custom format, please **be sure to include the bleed area** in your desired size. For instance, a custom format of 1000 x 1000 mm has a required bleed area of 5 mm. Therefore, your design size must be 1010 x 1010 mm. There is then an extra 5 mm bleed on each side.

3 Extra checks

There are some checks to take into consideration before exporting your artwork:

- **Check the amount of pages** in your document, it should be the same as ordered.
- All fonts and objects must be **embedded**.
- Check your layers for **overprint**.

Here you can find a recap on the [most common print mistakes](#) and how to avoid them.

4 Export to PDF

Export your artwork to PDF format and make sure your document **colour mode** is CMYK.
