

Top-down approach to energy management

With a focus on driving economic value, our services and delivery approach helps our business clients achieve their energy and operational efficiency goals.

▲ Comprehensive energy management

If you're in the market for an energy management solution, you'll find no shortage of software, hardware and tools that address one aspect of the problem. And, with some effort, you may even cobble together some combination of those tools to effectively address your business's needs. But what you really want is exactly what our Managed Energy Solution (MES) offers: an end-to-end, holistic energy management solution that increases the value of your business operations by reducing expenses, improving your work environment and prioritizing return on investment. MES reduces your risk and enables you to focus on what's important: your core business.

▲ A turnkey solution for your portfolio

MES leverages CLEAResult's nationwide network of energy experts, trade allies and partners to deliver a turnkey solution tailored to your specific sustainability goals and objectives. We're your trusted advisor in understanding technology, the marketplace and the available energy utility rebates that can deliver the most cost-effective strategic energy management solution. MES reduces operating costs, increases value and manages risk in customer asset portfolios. We provide the knowledge and analysis you need to better understand portfolio performance as well as clear insights into time and investment priorities. And, because we're technology-agnostic, we can help you extract the maximum economic value from your overall energy budget.

MES key components

Manage
expenses

Optimize
operations

Implement
technology

Deploy
resources

▲ The full force of our expertise dedicated to your needs

MES makes use of a full interdisciplinary team—including certified energy engineers, consultants, analysts, outreach specialists, program managers, communications specialists and field implementation technicians—to create a flexible, scalable solution across your specific portfolio and each individual facility's needs. Our managed energy solution:

- **Manages expenses.** Our proactive, strategic energy expenditure analysis reduces operating costs and manages energy procurement decision risks on an ongoing basis.
- **Optimizes operations.** Effective monitoring, assessment and management of operations reduces costs, downtime and emissions while enhancing the work environment, profitability and corporate value.
- **Implements technology.** With our Design Build experience and turnkey implementation approach, we provide seamless implementation of technology solutions that reduce operating costs and downtime while enhancing productivity.
- **Deploys resources.** We work with you to implement on-site generation and storage resources to ensure an optimized approach—with mitigated risks and lower costs.

MES core services

Manage expenses

- Resource Conservation Advisory services
- Energy Master Planning
- Utility bill management
- Rate/tariff analysis
- Procurement services

Optimize operations

- Facility assessments
- Continuous monitoring and analytics
- Sustainability and greenhouse gas (GHG) planning and reporting

Implement technology

- Energy efficiency implementation management
- Controls, building automation system enhancements
- Demand management
- Energy stakeholder engagement

Deploy resources

- Consulting and feasibility services
- Combined heat and power site
- On- and offsite renewables development
- Onsite storage development
