

Apple Pay Now Supported on Third-Party Browsers

Starting **February 24, 2025**, Apple Pay is now supported on third-party browsers such as Chrome, Firefox, Mozilla, and Edge. This update to our integration allows even more shoppers to use one of the world's leading payment wallets, without any additional merchant action to enable this storefront functionality.

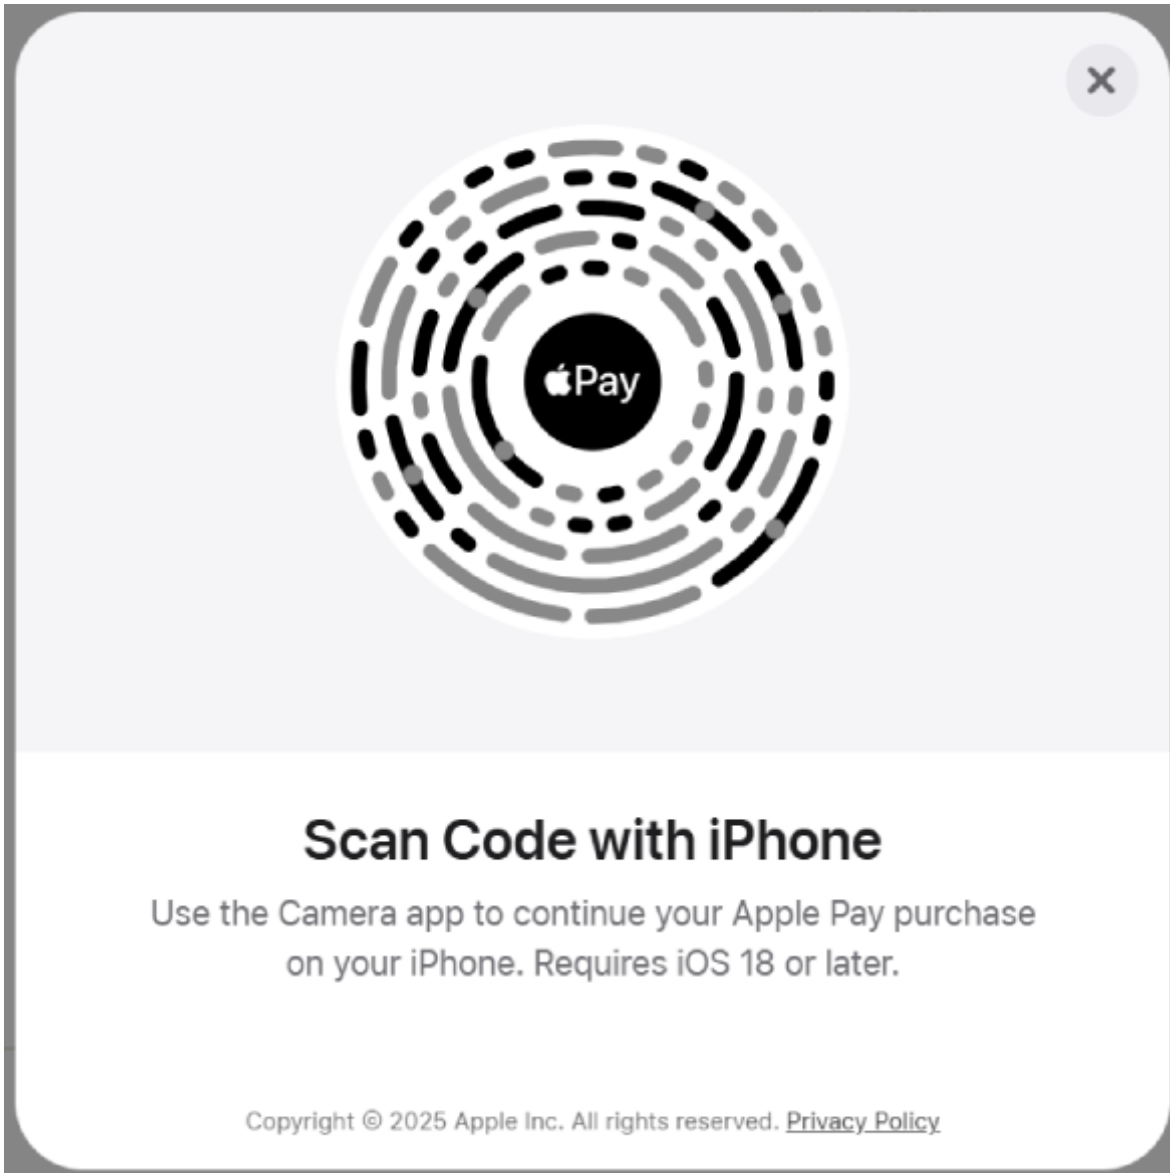

Reach even more potential customers

Introduced at Apple's [Worldwide Developers Conference \(WWDC\)](#) in June 2024, the iOS 18 release unlocked Apple Pay on the web for all browsers. This has been a long-standing limitation to the payment wallet, which previously required that shoppers must be using Safari, Apple's default browser, in order to even see the Apple Pay buttons on the cart, checkout, and product detail pages. This change gives customers and guests the opportunity to use Apple Pay as a payment method, no matter what browser they're using, provided that they meet the additional shopper requirements.

A new shopper experience

After clicking the Apple Pay button in a third-party browser or on a non-macOS device, shoppers will be prompted to scan a code with their iPhone, iPad, or another compatible device running

iOS 18 or newer. Once payment is completed on their device, shoppers are redirected to the order confirmation page. It's that easy!

Available on all Apple Pay payment integrations

We've updated our Apple Pay integrations across the entire BigCommerce platform to leverage this exciting functionality, no matter which payment provider you are using to access Apple Pay on the storefront.

Supported payment gateways for Apple Pay include:

- Access Worldpay
