

WARRIOR THERMOSTATIC RADIATOR VALVE

Description

Warrior Thermostatic Radiator Valves (TRV's) are supplied conforming to EN215. Pack includes chrome plated TRV (with white functional head) and Lock Shield valve. The Warrior TRV is designed to work within a temperature range from 6 to 28 degrees and includes a handy frost protection setting. Product can be mounted horizontally or vertically as benefits from bi-directional flow and is easy to fit as it utilises compression fittings.

Warrior TRV's are self regulating valves fitted to radiators in a hot water based central heating system to control the temperature of individual rooms by changing the flow of hot water to the radiator.

Technical Data

Size range: 15mm diameter
