

# THE 2024 RACIAL JUSTICE STEAM COLLECTIVE YOUTH SUMMIT

Over the course of two Saturdays in March 2024, youth participants joined the RJSC at the Science Museum of Minnesota to explore the many intersections of race and health, engineering, environmental justice, and technology. In our post-event survey, respondents shared overwhelmingly positive feedback.

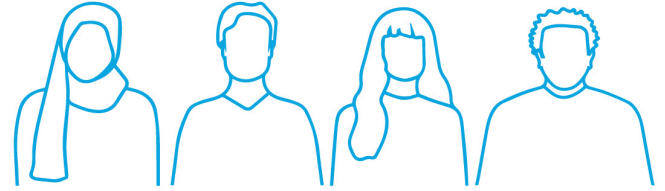

“

Before this event, I never knew that you could code a light display. Now I use it as a nightlight, and I also have used the kit we got for free and have learned code.

**100%** \_\_\_\_\_

learned something new about the intersections between race and health, data, engineering and environmental science, and the links between STEM and art.

**88%** \_\_\_\_\_

said that the inclusion of Black, Brown, Indigenous, and Asian voices helped them to connect to the subject matter better.

**70%** \_\_\_\_\_

attended both sessions.

**76%** \_\_\_\_\_

left the event more interested in pursuing careers in STEM fields.

“

I implemented a lot of the ideas I learned here. This summit definitely made an impact to me and my brother who also attended. Thank you for your great work! :)
