FlowPlanner

Empower team collaboration in hybrid work environments

It's time to create offices for the era of flexibility and collaboration. As businesses start to plan their post-Covid office strategies, many companies are now officially re-designing their office space to facilitate collaboration and teamwork when other aspects of work can be conducted from home. This in turn creates space deficits when fixed seating arrangements are no longer sustainable. Moreover, with flexible work schedules becoming the new norm, new challenges emerge regarding both overcrowding and on-site collaboration.

FlowPlanner is an integrated application to our Smart Office Solution and empowers employees to efficiently plan their office attendance in work environments with increased flexibility. It's effective and simple design allows employees to make decisions about office attendance based on available spaces, while simultaneously scanning colleagues' future office attendance to plan collaboration on-site. FlowPlanner also assists office managers to eliminate overcrowding when right sizing the office to a hybrid work environment.

With Flowscape's FlowPlanner solution, you will be able to

- Share your office attendance on specific days
- Make decisions about office attendance based on available spaces and crowding
- Increase employee productivity by enabling ad-hoc collaboration on site
- Eliminate overcrowding when right sizing your office to a hybrid work environment
- View number of attendees at the office in case of emergencies
- Build future space management strategies based on the overall attendance at your office

Share your office attendance on specific days

Make yourself seen and be guaranteed a seat. By using FlowPlanner you can register office attendance with just a few clicks. Simply open the FlowPlanner in the mobile app or web application, select which day you want to come to the office, time duration for your visit and confirm. FlowPlanner syncs with the desk bookings you make, automatically registering attendance for the days you have booked a workspace. Your schedule is easily accessible under "Booked resources" so you can get a clear overview and quickly review your plan for the week ahead.
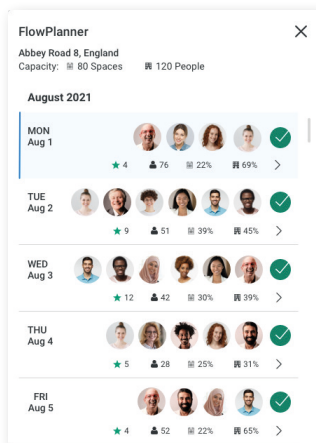

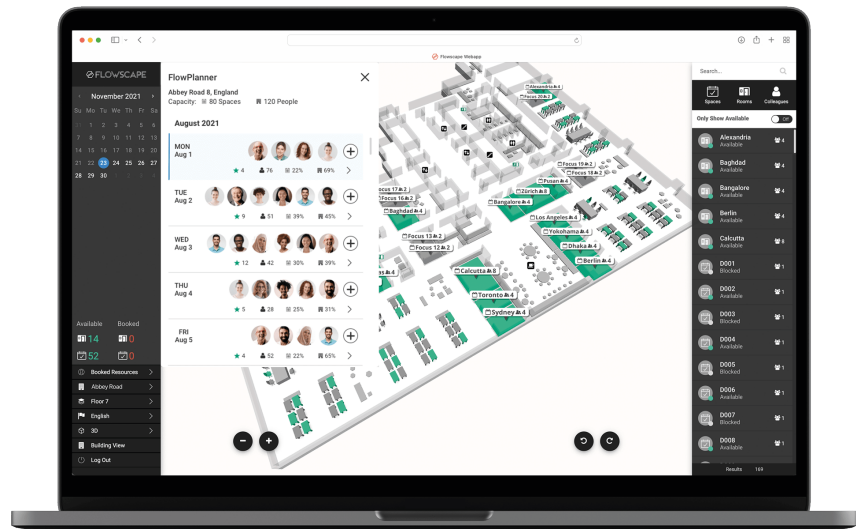

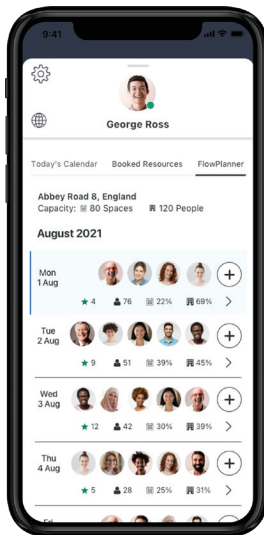

Make decisions about your office attendance based on available spaces and crowding

Some people prefer a quiet and less hectic work environment, while others want to come to the office when it's filled with colleagues. While using FlowPlanner, employees can see the percentage of office capacity reached for each day. Depending on the percentage given, employees can decide on whether to come to the office or work from home based on their own work preferences. Percentage of spaces available and office capacity reached are calculated by the buildings configured capacity and is easy to register in the Flowscape portal.

Increase employee productivity by enabling ad-hoc collaboration on site

Planning office attendance in endless email threads and chat conversations can now be a task of the past. Employees can add their closest team members to their selected colleagues list, enabling them to always keep track of their team members future office attendance and desk bookings for weeks ahead. Employees can, based on their team members office attendance, plan their own trips to the office and simultaneously book spaces close to them.

Eliminate overcrowding with settable maximum level of attendance at the office

When maximum capacity is reached for a certain day, The FlowPlanner will automatically deny access for employees who tries to register attendance and redirects them to book for another day. Office managers can now with one easy tool manage overcrowding and make sure that their new flexible seating arrangements don't create seating issues for employees when planning their trips to the office.
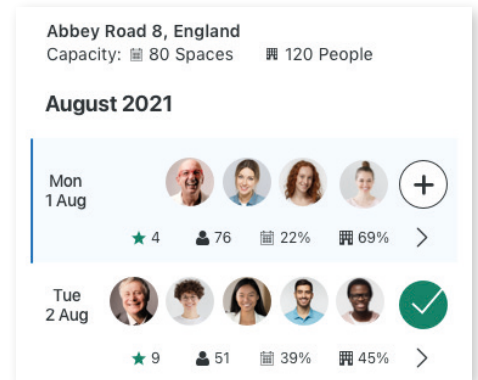

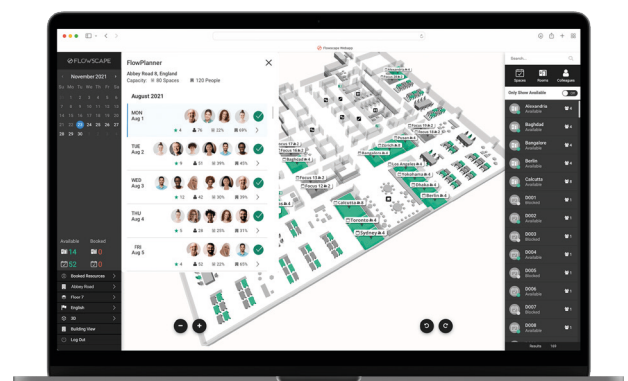

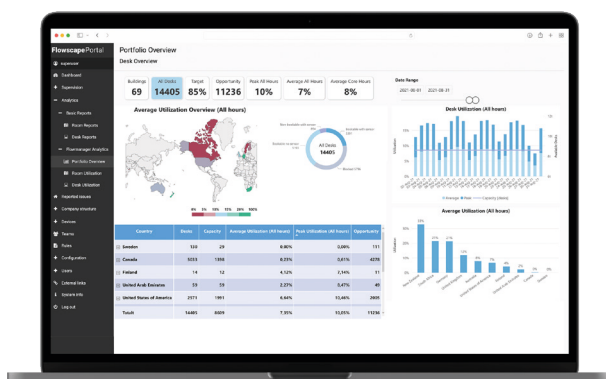

Produce attendance reports in case of emergencies

Lack of knowledge about which employees are actually in the office for any particular day can create immense security challenges in case of emergencies. FlowPlanner automatically produces attendance lists for each day that can help managers ensure safety for employees when needed. Flowscape's statistic portal, FlowManager, can also on request produce contact tracing reports based on employee's desk bookings if illness should be reported, allowing them to quickly alert employees in close proximity to the outbreak.

Build future space management strategies based on the overall attendance at your office

Flowscape's statistic portal produces real time data on office attendance and desk bookings which can be analyzed when making strategic decisions about office space changes. By using Flowscapes sensor technology together with FlowPlanner and desk booking data, Facility Managers can start identifying trends and workflows that can lay the groundwork for future office changes. Flowscape's statistic portal; FlowManager, is an integrated module to our application and is used to view and analyze historical data about the utilization of various resources in your office. Flowscape also offers extended analytic capabilities for multi-office companies and global corporations to centralize property management.
