# Ducati Link GPX file tutorial

The **Ducati Link** allows in APP to import and export GPS routes via GPX files.

Note. To date, Ducati Link supports the GPX of **Track** type only and works on urban roads (not off-road). In addition, the use of GPX navigation is limited to vehicle equipped with Ducati Multimedia System and turn By Turn navigation (consult <u>www.ducati.com</u> or contact your dealer of choice to find out if your motorbike supports both **DMS** and **TBT**).

The operation is similar in **Android** and **iOS** operating systems.

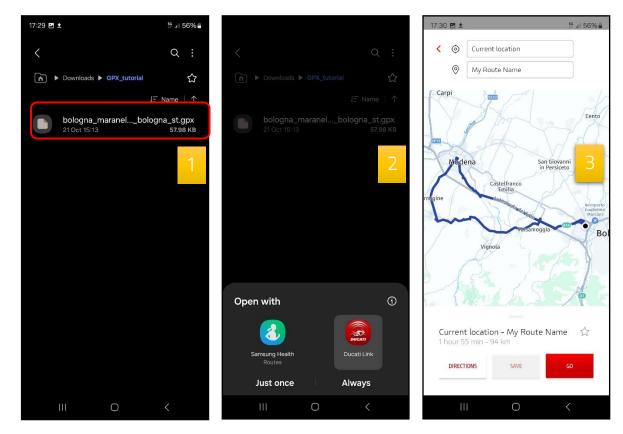

# 1. Import GPX file

If you already have on your device storage the GPX file to use (e.g. in your device files storage, or as attached file in your e-mail, or as shared document in messaging conversation), to import the itinerary in APP simply select the file and open it with *Ducati Link*.

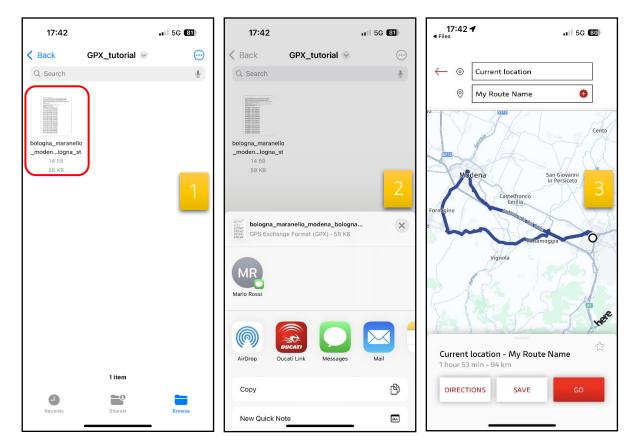

For the correct use of the APP, remember to verify the GPX to be imported has the Track component (whether or not it also contains Waypoint or Route components).

- 1. Find the GPX file on your device.
- 2. Select Ducati Link to open the file.
- Ducati Link imports the GPS route and shows the path preview. Note: to date, Ducati Link doesn't allow to save in APP the GPX Track path, so you have to import it upon departure.

### Android:

#### iOS:

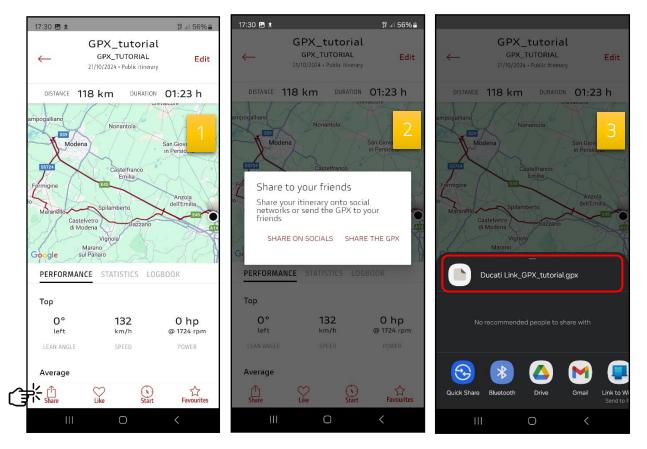

# 2. Share GPX file

Ducati Link allows you to share a route exporting it as Track GPX file. To do so, please follow these simple instructions:

- 1. Identify the route to share directly from the APP, between your register itineraries, and tap the "Share" button at the bottom of the page.
- 2. Tap the "Share the GPX" option in the choice popup.
- 3. Select the location where to save the file, or which APP to share with.
