CDX-GT540UI

CD Receiver MP3/WMA/AAC Player

- Multi-format playback lets you play CDs, CD-Rs, or CD-RWs loaded with hundreds of MP3, WMA, or AAC songs¹. Hear the music on your recorded CDs and MP3 files in their original vibrancy with DM+ (Digital Music Plus), an original Sony® codec enhancer that reproduces detailed and high-frequency sound from compressed audio.
- USB² 1-Wire for iPod®² lets you directly connect, charge, and control your digital music player via the USB jack in the front of the unit, as well as view metadata like song title and artist on the front display.
- Quick-BrowZer® feature lets you search and select songs by category, including artist, album, genre, or playlist.
- Jump Mode gets you closer to the song you want by allowing you to fast forward through a music category in 10 percent increments.
- With Zappin™ feature, you can play music in 6, 9, or 30-second clips until you find the song you're looking for.
- Passenger Control lets your co-pilot control the music playing from your iPod®² device via connected USB 1-Wire, and as they scan through your music, artist and album information is conveniently shown on the receiver display.
- The front auxiliary input lets you connect almost any portable audio device to your car's sound system.
- The GT540UI integrates seamlessly with the optional Sony HD Radio tuner⁴ or satellite radio receivers via built in Sony® Bus control so you can receive digital radio broadcasts³.
- The Sony® Xplod™ GT540UI delivers 52 watts of peak power to all four speakers (208 total watts) for increased sound levels.
- A built-in LPF (Low Pass Filter) and HPF (High Pass Filter) work to deliver overall better sound, and the LPF features a phase shift function that reduces low-end reverberation.
- Radio Data System (RDS) feature displays radio broadcast information such as artist, title, and album when listening to compatible AM/FM stations.
- The included Wireless Card Remote allows you to control the basic functions of your Sony® Xplod™ system while keeping your eyes on the road.

How to Tune an Edelbrock 1406 Carburetor

By John Stevens, eHow Contributor updated March 01, 2011

Like Send 0 0

The Edelbrock 1406 is a four-barrel "Performer Series" carburetor fitted with an electric choke. Although Edelbrock carburetors are designed to work right out of the box, variations in temperature and altitude can affect the carburetor's performance. To compensate for these variables, even a new 1406 should be tuned up. Fortunately, doing so is a fairly straightforward process and no disassembly is required.

Difficulty: Moderate

Instructions

Things You'll Need

Standard screwdriver

Vehicle's specifications manual

- 1 Locate the two air/fuel mixture screws and the idle speed screw, also known as the air screw. Note that three metal ports extend from the front of the carburetor, just below the "Edelbrock" emblem. On each side of the middle port is a standard screw. These two screws are the air/fuel mixture screws. The idle speed screw is a standard screw located on the front of the bottom of the throttle linkage. The throttle linkage is located on the driver's side of the carburetor.
- 2 Start the engine and allow it to warm.

- 3 Adjust the idle speed screw until the desired idle speed is reached, as noted by the vehicle's tachometer. Consult the vehicle's specifications manual if the speed will be set to the engine's stock setting. Turn the screw in a clockwise direction with a standard screwdriver to increase the engine speed, and in a counterclockwise direction to decrease the engine speed.
- 4 Turn one of the air/fuel mixture screws in either direction with a standard screwdriver only until the maximum engine speed is reached.
- 5 Lower the engine's idle speed to the desired level by turning the idle speed screw in a counterclockwise direction if the idle speed has increased by more than 40 RPM.
- 6 Turn the remaining air/fuel mixture screw in either direction only until the maximum engine speed is reached.
- 7 Lower the engine's idle speed to the desired level by turning the idle speed screw in a counterclockwise direction.
- 8 Adjust each air/fuel mixture screw in small increments until the highest idle speed is reached.
- 9 Turn both air/fuel mixture screws in a counterclockwise direction in small, identical increments until the idle speed decreases by 20 RPM.
- 10 Lower the engine's idle speed to the desired level by turning the idle speed screw in a counterclockwise direction.
