

Powering a Sustainable Digital Future – Together

At TDC Erhverv, we believe technology should be a force for good - for your business, your customers, and society at large. Whether it's circular device solutions, secure digital infrastructure, or reducing your IT footprint, we're here to help you turn your ESG goals into real, measurable outcomes.

A Circular Future Starts Here

Imagine a world where IT equipment doesn't go to waste - but gets a second life. With our circular programmes, *Mobile Return Program* and our partner *Cisco's Take-Back Incentive*, we help extend the lifecycle of your tech and keep valuable resources in use.

Energy Use, Optimised

Every kilowatt-hour saved counts - for your carbon footprint and your bottom line. With energy-efficient solutions like *Cisco Meraki access points powered by PoE*, and *Managed Network Services* that enable live monitoring and power usage optimisation, we help reduce unnecessary consumption and enable smarter operations.

Turn data into climate action

TDC Erhverv's CO₂ Tracker for mobile subscriptions and mobile broadband gives you access to accurate, validated Scope 3 emissions data. Based on actual network and usage data, it provides a reliable foundation for ESG reporting and climate documentation.

Cybersecurity - Your Strongest Defence

In a world where data is currency, security is everything. With services like *CISO as a Service* and *Governance, Risk & Compliance*, we help protect your business from evolving digital threats. Whether you need strategic guidance or hands-on protection, our cybersecurity solutions are built to help you grow with confidence.

Secure Data

Your data is more than just information - it's trust. With TDC Erhverv CloudKey®, sensitive data is encrypted, access-controlled, and built with privacy at its core.

Strengthening Cyber Resilience Together

Through free initiatives such as Cyber Security Dagen and Hele Danmark Øver, TDC Erhverv helps Danish businesses strengthen their digital preparedness through inspiration, learning and hands-on exercises. Designed to raise awareness of cyber threats and help organisations build stronger cyber resilience.
