SC/V

Pneumatic Valve Actuators

Our pneumatic linear piston actuators are designed to drive control valves for the most demanding applications in the power and oil & gas industries; such as turbine bypass, steam conditioning valves, desuperheaters, compressors and antisurge. Thanks to the special patented piston design, including a double ring guiding system and a grease channel providing continuous lubrication, SC/V actuators ensure smooth and precise valve operation without any maintenance for the whole operating life. This series of actuators are designed with a patented plug-in connection system for a wide range of customer-tailored accessories and control systems to meet the most demanding and critical valve operating conditions.

Product features

Several sizes available from 150 mm to 1600 mm or larger if required.

Several strokes available.

Double acting and single or double acting plus spring design.

Die casting aluminum bodies for small/medium sizes up to ND 320.

Carbon steel bodies for larger sizes.

Fully stainless steel design available for both double acting and spring return actuators for the harshest environment conditions.

Heavy duty control actuators designed for the most challenging applications used in the oil & gas and power industries.

Technical specifications

Standard pneumatic supply medium
Air, nitrogen or sweet gas (special version for sour gas on request)

Operating pressure
Pneumatic version up to 10 bar (design up to 12 bar)

Standard operating temperature
-20°C to 70°C (lower or higher temperature on request)

Certifications / approvals
PED 2014/68/EU
ATEX 2014/34/EU
EAC TR TS 012/2011
MACHINERY DIRECTIVE 2006/42/IEC
IP66/67M according to IEC/EN 60529
SIL3 certified (IEC 61508)
as a "single device"
Designed and tested in accordance with EN 15714-3

Further certifications are available please contact IMI STI for updated list.

Application on the North Sea

Dimensions

The picture shows a double acting SC/V 1400 with manual hydraulic override. High flow 3-way pneumatic valves are used to achieve very fast opening/closing time.

Shorter travels are available on request.

* Stroke, including reserve stroke, available for each type of actuator.

** This is the active area of each type of actuator.

Further information and specific technical support may be obtained by contacting IMI STI sales organization.

Actuator with piston built-in permanent lubrication system

The SC series of actuators are provided with a built-in permanent lubrication system, patented by IMI STI, which assures an extremely smooth valve operation even if dry instrument air is used. Thanks to this lubrication system, which is common to all IMI STI actuators, no maintenance to moving parts is required, even after many years of continuous service.

The patented lubrication system consists mainly of a grease lubricant filled annular cavity placed inside the cylinder piston, between a sealing ring and a sliding ring to avoid direct contact between the metal surfaces of the piston and the cylinder, even in case of lateral forces acting on the actuator stem; the grease in the annular cavity, keeps the metal parts lubricated during piston movement allowing very smooth sliding and a long seal life.

Optional accessories

IMI STI designs and produces a wide range of accessories and control systems to ensure superior performance and to satisfy the most demanding requirements in modulating, on/off and heavy duty service.

Control systems pan-els/cabinets can be installed on the actuators or supplied loose for remote mounting which allows for easy access and limits exposure to excess heat and vibration. For more information, see dedicated brochure of accessories.

Benefits

Available in single/duplex/triplex configuration for thrust and space optimization. Double acting or spring return.

SC/V actuators are designed to meet SIL 3 requirements (IEC61508) as a "single device". SIL analysis report of the safety loop available on request.

Double guide for piston and bushing.

Manifold mounted 3 way valves and accessories for optimal performances and increased safety.

Patented piston design with double ring guiding system and grease channel which makes it virtually maintenance free.

Exhaust mufflers with integral non return valve to prevent contamination of actuator internals.
