

Cribl®.Cloud

All the power, none of the servers.

The **AI Platform**
for Telemetry

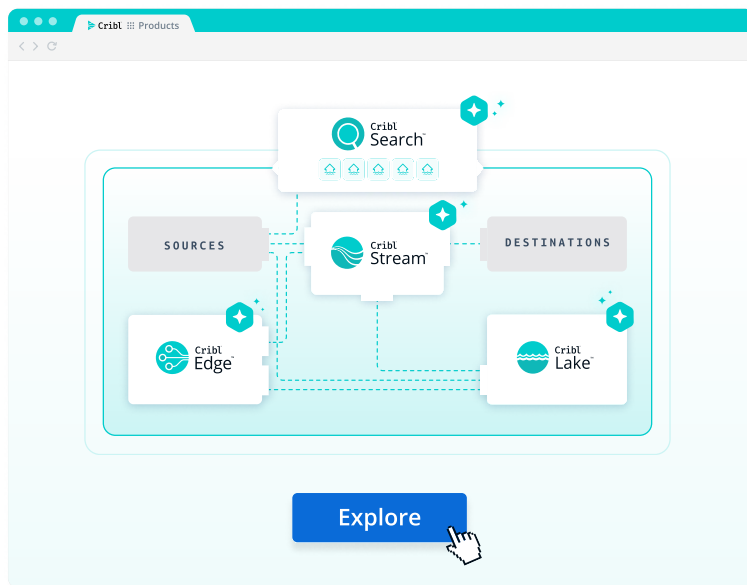

The challenge

Data volumes are exploding, and your infrastructure is crying for help. IT and Security teams are buried under a mountain of noise, making it nearly impossible to find the data that actually matters. Plus, AI agents are only making the noise worse.

The solution

Cribl.Cloud is a fully managed, cloud-native platform that gives you instant access to all Cribl products and services, including **Cribl Stream**, **Cribl Edge**, **Cribl Search**, and **Cribl Lake**, as well as AI-powered solutions. Control what telemetry data you collect, transform, route, and store without being bogged down by infrastructure maintenance.

With elastic scalability, easily adapt to changing data demands while maintaining compliance through built-in security controls. This gives your team the freedom to focus on initiatives that matter.

Suite of products

Stream

A vendor-agnostic observability pipeline for data collection, reduction, enrichment, and routing.

Edge

An intelligent, scalable, edge-based data collection system for logs, metrics, and application data.

Search

A unified search experience across all telemetry, with AI-guided explorations to get answers from data fast.

Lake

Simplified, cost-effective storage solution that allows organizations to store and access any type of data while offering robust access control, retention policies, and authentication features.

Benefits

IMMEDIATE PRODUCTIVITY

Get the full suite of telemetry tools up and running in minutes. Start routing, searching, and managing data quickly instead of waiting for hardware or infrastructure to be provisioned.

MAINTENANCE ON AUTOPILOT

Stop spending your weekends on patches and cluster management. We handle the platform's backend reliability and security, so your team can focus on finding threats and troubleshooting performance bottlenecks.

SEARCH DATA WITHOUT MOVING IT

Access and query your telemetry wherever it lives. Whether it is at the edge or in low-cost storage, you get a complete view of your environment without the time or expense of centralizing it first.

SERENITY AMIDST THE CHAOS

Handle massive data surges during a security event or a traffic peak without a second thought. The platform scales automatically to match your volume, ensuring your performance stays consistent when things get chaotic.

SECURE BY DESIGN

Operate with confidence in a managed environment built for enterprise rigor. We provide the governance and compliance controls you need to keep your data safe and your auditors happy without you having to build the security architecture yourself.

SECURELY CONTAINED OPERATIONS

Eliminate capacity trade-offs and noisy-neighbor contention. Spin up isolated environments for specific teams or projects. You get the power of multi-tenancy while admins maintain centralized governance and keep sensitive data strictly separated.

Get started with Cribl.Cloud.

Cribl.Cloud is a fully managed, cloud-native platform that brings together all Cribl products and services, including Stream, Edge, Search, Lake, and AI-powered solutions, under one roof. It gives teams full control over how telemetry data is collected, transformed, routed, and stored without the headache of managing infrastructure, freeing your team to focus on what matters most.

Get started with a [free trial](#) today and process up to 1TB/day!

"I believe data needs to be clean, normalized, and healthy in order to get any good insights. Cribl.Cloud lets me see my changes in a preview before hitting go. Routing only clean data helps minimize license spend and maximize the performance of our analytics tools."

ABOUT CRIBL

Cribl, the AI Platform for Telemetry, empowers enterprises to manage and analyze telemetry for both humans and agents. Trusted by organizations worldwide, including half of the Fortune 100, Cribl bridges the gap between AI ambition and infrastructure reality. No lock-in. No data loss. No compromises. Cribl's vendor-agnostic platform ensures data remains portable and interoperable. By cost-effectively handling increasing data volume and variety without delay, Cribl gives enterprises the choice, control, and flexibility to build what's next. Founded in 2018, Cribl is a remote-first workforce with an office in San Francisco, CA.
