

## Market challenge

As the digital landscape evolves, the volume of data produced by systems surges, and security data is no exception. With the shift towards cloud environments, securing these platforms introduces unique challenges: developers increasingly influence infrastructure decisions, gaining comprehensive visibility becomes more complex, and large amounts of security data create "noise" that complicates prioritizing alerts. These factors demand sophisticated solutions that streamline data management and enhance security responsiveness.

## Better Together

Wiz scans across the cloud for risks like misconfigurations, exposed secrets, excessive privileges and prioritizes toxic combinations that create qualified attack paths as the critical Issues to fix. Integrating with Cribl Stream, this partnership enables enterprises to automate the collection and scheduling of essential cloud security data from Wiz. The integration facilitates routing this data to various destinations integral to security workflows. This synergy not only simplifies data management but also enhances the ability of security teams to respond swiftly and accurately to potential threats, ensuring a robust security posture.

## Benefits of the integration

- **Immediate Cloud Security visibility:** Gain immediate visibility into your cloud's security posture with Wiz's agentless approach to comprehensively scan across cloud resources.
- **Enhanced Data Visibility:** Integrate and seamlessly route data from Wiz to multiple destinations, enhancing overall data visibility and access.
- **Simplified Compliance:** Streamline the integration of compliance-focused data into long-term storage solutions, easing adherence to regulatory standards.
- **Comprehensive Risk Views:** Facilitate audits and regulatory reporting by providing complete and easily accessible views of enterprise risks.
- **Operational Efficiency:** Optimize data routing, reduce data redundancy, and enhance the overall operational efficiency of security data management.

## Use case overview

### Challenge

Enterprises struggle with data silos and the high costs of maintaining compliance with regulatory requirements.

### Solution

The integration of the Wiz Cloud Security Platform with Cribl Stream enriches, deduplicates, and transforms data, bridging gaps and speeding up investigations. This integration allows for effective data retention and compliance and enables security teams to have the cloud context necessary when fixing risks or threats in the cloud.

### About Cribl

Cribl, the Data Engine for IT and Security, empowers organizations to transform their data strategy. Customers use Cribl to analyze, collect, process, and route all IT and security data, delivering the choice, control, and flexibility required to adapt to their ever-changing needs.

### About Wiz

Wiz is on a mission to transform cloud security for customers – which include 35% of the Fortune 100 – by empowering them to embrace a new cloud operating model. Its Cloud Native Application Protection Platform (CNAPP) delivers full-stack visibility, accurate risk prioritization, and enhanced business agility. The result? More context with less noise, so that security teams can focus their time on what matters most.
