

>SOLUTION BRIEF_

Cribl AI

THE CHALLENGE

"I need some time to think." Mundane tasks create challenges that take away valuable problem-solving time. In addition, more tasks that require more intensive analysis are invading our inbox.

THE SOLUTION

Cribl's AI tools are purpose-built to allow brilliant people to do brilliant things by reducing the time spent on simpler tasks, enabling us to do what humans are great at - thinking. Cribl AI features speed time to value, bridge the skills gap, and enhance team productivity without losing the all-important human element.

THE BENEFITS

- **Eliminate PII / Sensitive Data Leaks:** Cribl Guard scans your Stream data looking for both obvious and obscure sensitive data. You choose how to handle it: mask or delete the data depending on your policies.
- **Ease:** Simplifies configurations allowing staff to build solutions, and optimize use of resources for faster time to value.
- **Visualization:** Quickly see trends and patterns with Cribl AI-driven visualization tools.

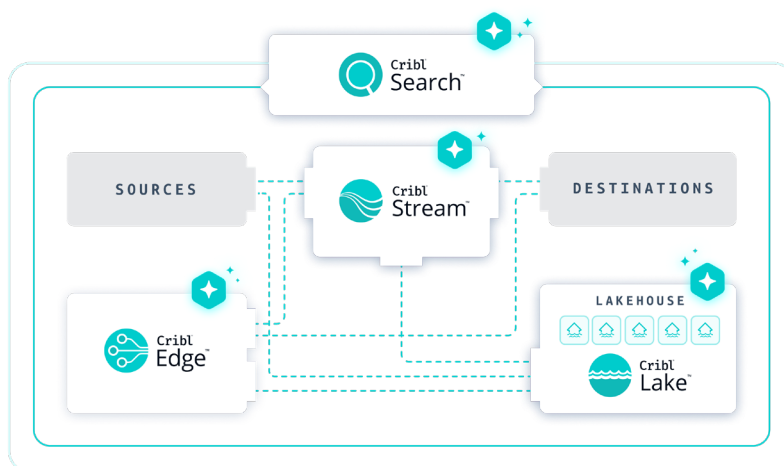

Cribl AI's core philosophy is Human-in-the-Loop — always. Whether it's researching Cribl documentation, helping create scripts and queries, or scanning data and mitigating sensitive data risks, Cribl AI is your partner in efficiency. Bring clarity to telemetry by reducing noise, cutting costs, and empowering SOC, SRE, and IT Ops teams to focus on tasks that require human judgment and critical thinking.

The challenge

There is a fundamental tension created between exploding data growth, while resources meant to deal with that data growth are typically flat or experiencing minimal growth. The growing gap means that organizations can't scale the resources, time, and data expertise required to configure and maintain new systems while keeping up with the increasing complexity of their Cloud and hybrid infrastructure. Additionally, using the most experienced employees to work and address repetitive tasks takes them away from solving the critical and complex problems organizations face daily- which is also a hidden vampire on team productivity.

The Cribl solution

Cribl AI isn't a single solution to a single problem. It's part of Cribl's DNA, present across multiple product functions. Cribl Guard searches Stream looking for PII / sensitive data. You choose whether it masks or deletes private information. Cribl AI also helps in creating and editing scripts using natural language, no matter the query language. Cribl Copilot is there as your personal research assistant, giving you quick answers to the most challenging questions.

Cribl AI

Faster deployments +
optimized staff usage +
guided configurations +
easier troubleshooting
= faster time to value.

Cribl AI makes it easy to:

Generate insights

Anticipates users' needs with auto-generated insights, dashboards, and notifications based on organizational data and system metadata.

Generate Code Functions, Pipelines, and Kusto Query Language (KQL) using natural language

Natural language reduces learning curves to minutes, enabling users to literally ask questions of their data and allowing Copilot to create complex observability pipeline configurations and search queries to find answers and get valuable data to any destination — fast.

Translate Splunk Processing Language (SPL) to syntactically correct KQL

In addition to converting natural language queries, Cribl AI can translate Splunk (SPL) queries into equivalent Cribl Search (KQL) queries, simplifying complex query configurations.

Chat with Copilot to address problems

Coach engineers through the most challenging data problems by tapping the sum total of Cribl's entire solution engineering experience in real-time.

Build Cribl Search dashboards

Copilot's natural language to KQL translation also allows you to generate basic or complex dashboard panels for existing or new dashboards.

Build AI-powered troubleshooting tools

Dedicated support guru for every engineer to build troubleshooting tools and reduce time to resolution of problems.

Build language models

Produce data-driven insights to find new pathways to accelerate productivity across your organization.

ABOUT CRIBL

Cribl, the Data Engine for IT and Security, empowers organizations to transform their data strategy. Customers use Cribl's vendor-agnostic solutions to analyze, collect, process, and route all IT and security data from any source or in any destination, delivering the choice, control, and flexibility required to adapt to their ever-changing needs. Cribl's product suite, which is used by Fortune 1000 companies globally, is purpose-built for IT and Security, including [Cribl Stream](#), the industry's leading observability pipeline, [Cribl Edge](#), an intelligent vendor-neutral agent, [Cribl Search](#), the industry's first search-in-place solution, and [Cribl Lake](#), a turnkey data lake. Founded in 2018, Cribl is a remote-first workforce with an office in San Francisco, CA.
