

Turn clean data into confident action with Tines and Cribl

Power intelligent IT, security, and AI operations on a unified telemetry foundation.

USE CASES

Telemetry management and enrichment

Alert triage and investigation

Incident response and remediation

Vulnerability management

AI and agent operations

SIEM and workflow optimization

Complexity is getting in the way of smarter operations

IT and security teams manage growing volumes of telemetry across increasingly complex environments, with data spread across more tools, systems, and infrastructure.

AI creates new opportunities to make sense of that data and to use it to work faster and more effectively. But realizing that potential requires you to have the right data and context available to people and AI, while securely running and managing the growing number of workflows, apps, and agents that put it to use.

Put the right data behind every workflow, app, and agent

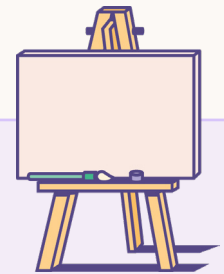

Cribl helps you collect, process, route, store, analyze, and search telemetry across your environment. Turning that telemetry into answers, not just clean data, makes the right data and context available to people and AI. Tines lets you build intelligent workflows, apps, and agents your way, then provides a secure environment to run, monitor, manage, and maintain them at scale.

Together, you can make better use of your telemetry and AI while reducing cost, complexity, and operational burden as you scale.

Benefits

With Tines and Cribl, you can:

- **Give AI and automation the right context to operate:** Cribl, the AI platform for telemetry, helps bring telemetry and context from across your environment together, giving workflows, apps, and AI agents running in Tines the high-fidelity signals they need to investigate, decide, and act.
- **Accelerate investigation and response:** Use Cribl to turn data into signals, then Tines to enrich it with context from any tool in your tech with an API and coordinate investigation and response accordingly.
- **Run and manage AI-created work at scale:** Create workflows your way, from natural language in Tines to your preferred AI and coding tools, connect them with Cribl's AI telemetry foundation, then securely run, monitor, and maintain your work at scale.
- **Reduce cost and complexity as you scale:** Cribl reduces unnecessary data movement, duplication, and ingestion costs so you're not paying to move or store data you don't need. Tines helps you identify duplicate or failing workflows, understand dependencies and AI costs, and continuously improve performance.

About Tines

Tines is the intelligent workflow platform trusted by the world's most advanced organizations. With Tines, they've built a secure, flexible foundation to operationalize AI agents and intelligent workflows, unlocking productivity, moving faster, and future-proofing how work gets done.

About Cribl

Cribl, the AI platform for telemetry, empowers enterprises to manage and analyze telemetry for both humans and agents with no lock-in, no data loss, no compromises. Trusted by organizations worldwide, including half of the Fortune 100, Cribl gives customers the choice, control, and flexibility to build what's next.
