

Cribl Copilot⁺

The **AI Platform**
for Telemetry

Cribl Copilot is an AI-powered chatbot within Cribl, the AI Platform for Telemetry, helping IT and security teams work faster by answering questions, guiding configuration, and helping troubleshoot data problems.

The challenge

It's costly and complex to onboard any new tool or data source, but reducing time to productivity is critical. At the same time, organizations are trying to keep up with growing data volume and increasingly complex cloud and hybrid environments without a matching increase in people, time, or expertise. Too often, the most experienced employees get pulled into deployment support and repetitive tasks instead of focusing on higher-priority analysis and harder operational problems.

The solution

Cribl Copilot speeds time to value, bridges the skills gap, and enhances team productivity. By eliminating the time-consuming requirement to rely on highly skilled engineers for basic tasks, it gives teams AI-augmented assistance that creates day-1 value and helps them get productive faster. By augmenting existing staff with the compendium of knowledge from Cribl's engineers, Cribl Copilot helps customers build efficient workflows and resolve challenging data problems without long learning-curve delays.

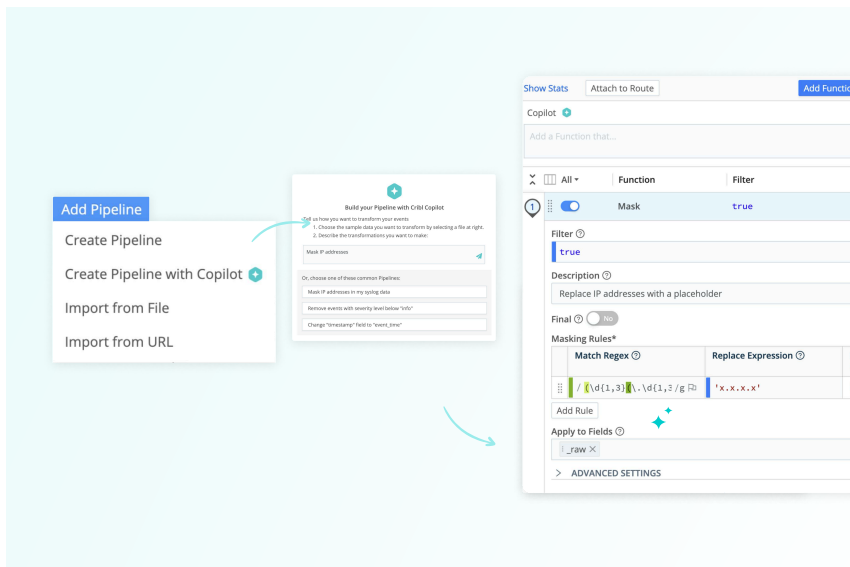

The challenge

Onboarding new tools and data sources takes time, expertise, and attention that most teams don't have to spare. As data volume and infrastructure complexity keep growing, organizations need a faster way to get more people productive without over-relying on their most experienced engineers.

The solution

Cribl Copilot gives teams fast, guided help exactly when they need it—so more users can answer questions, configure faster, and troubleshoot with confidence. That means less dependence on specialists, fewer delays, and faster time to value from the Cribl portfolio.

Cribl Copilot makes it easy to:

ANSWER TECHNICAL QUESTIONS

Give users fast answers to common product, deployment, and configuration questions across the Cribl portfolio.

GUIDE NEW INSTALLATIONS

Help teams reduce deployment time and avoid setup errors with guided configuration assistance, without waiting for formal training or digging through documentation first.

TROUBLESHOOT PROBLEMS

Act as another set of hands on the controls to help resolve configuration issues and accelerate time to resolution.

INSPECT YOUR DEPLOYMENT**

Answers to questions about your own Worker Groups, Sources, Destinations, Routes, Pipelines, system health, and more, drawn from your live configuration.

NAVIGATE THE CRIBL PORTFOLIO WITH CONFIDENCE

Understand when and how to use products, features, sources, destinations, pipelines, and routes more effectively.

Cribl Copilot is one of several AI-powered features across the Cribl product suite. To learn more about Cribl's broader AI capabilities, see the [Cribl AI overview solution brief](#).

The benefits

- **Speed:** Get deployments up and running on day 1.
- **Ease:** Simplify configurations and help more team members build solutions faster.
- **Choice:** Give teams more choice, control, and flexibility by empowering more users to get the right answers and take action with confidence.

Cribl Copilot

faster deployments, optimized staff usage, guided configurations, easier troubleshooting
= **faster time to value.**
