

Cribl App for AI Observability

See what your AI is actually doing — search, investigate, and report on cost, security, and performance across every model and tool.

The **AI Platform**
for Telemetry

The Problem

- Teams deploy LLM apps, agents, and gateways faster than observability architectures can track. That gap creates blind spots across cost, quality, security, and governance.

The App

- The Cribl AI Observability app gives teams one place to search, investigate, and report on AI telemetry across models, tools, and environments.

The Platform

- Built on Cribl's AI Platform for Telemetry, the app collects and normalizes data once, detects sensitive data, and visualizes AI usage, cost, and risk while keeping data accessible

One telemetry layer. Every AI tool.

AI usage and cost insights at a glance

Fast Time-to-Value

Go from connecting AI telemetry to investigating live data in minutes, skipping lots of pipeline and dataset setup.

Faster Time-to-Insight

No delays between ingest, normalization, search, and investigation.

No Lock-In

Investigate in Cribl while keeping AI telemetry open and routable.

Product Features

USAGE & COST

Track spend, tokens, and usage everywhere AI runs.

Usage and Cost Insight

- Spot spending and token trends across every model and team.
- Rank top users and models by cost in one view.
- Catch LLM efficiency anti-patterns before they inflate your bill.
- Set spend goals, like month-to-date token budget vs. target.

Org View

- Roll up spend, tokens, and requests by team or business unit.
- Join usage data against your org hierarchy for instant context.

SECURITY & DETECTION

Find sensitive data before it becomes a breach.

Security Insights

- Track sensitive data exposure rates across your AI stack.
- Break down findings by type, user, and tool.
- Audit every tool call for content risk.
- Set goals, like capping sensitive sessions below a threshold.

Sensitive Data Detection

- Find exactly where PII, PHI, and API keys appear in a trace.
- Break findings down by subcategory, not just a single flag.
- Analyze findings over time by user, model, and tool.

INVESTIGATION & INSIGHTS

Go from dashboard to root cause in one place.

Sessions & Traces

- Filter the full session list to find what matters.
- Walk the span timeline for any AI interaction.
- See full prompt, response, and tool-call payloads.

AI Insights

- Ask questions of your AI data in plain language.
- Get AI-generated briefs that flag what needs attention.
- Switch between Usage & Cost and Security personas.

AI powered insights - ask any question of your AI Observability data

Discover unauthorized tool usage by AI agents in your environment
