

GITLENS ENHANCEMENT

The continued push to focus on CI/CD has allowed development speed to increase while decreasing bugs.

THIS IS GOOD. MAKING IT HAPPEN
CAN BE HARD.

Constantly reviewing changes in a robust, process driven manner can be challenging and cause delays.

That is why T-Mobile partnered with Topcoder to build an enhancement to GitLens for Bitbucket.

This tool:

- Enables a CI process that enforces code reviews at the completion of a feature
- Integrates with existing tools and aggregates all commits within a certain feature so that they are reviewed as a whole
- Reviews are consistently being processes, speeding up the delivery process and empowering development teams
