RSL updated per May 2026

Introduction

The aim with this RSL is to set limits for the occurrence and phasing out unwanted hazardous and in several cases regulated chemicals that may occur and be used in RevolutionRace's products.

Different types of limits and their different meanings:

Legal limit

Above is illegal – below is legal.

Laboratory limits, such as LOD and LOQ

Above is detectable – below is not detectable.

Company limit

Above is not acceptable – below is acceptable. Can be everything from legal limits down to usage ban.

The commissioned lab must report according to the "laboratory limit" which in this RSL template is called "Lab. indicative limit value (mg/kg)". These lab limits should be the lab's reporting limits to the customer and NOT legal limits, as you as a customer only get a fail when the product is illegal and can't be brought into the EU.

The company should have its own limits, so-called Company limits, which in this RSL template are called "RevolutionRace requirement for suppliers", depending on the Company Chemicals Policy.

Supplementary tools to this RSL template

The chemical guide, <https://www.textileimporters.se/vad-vi-gor/kemikalieguiden/>, is not a Restricted Substance List (RSL) but a guide that describes the various regulated chemicals that are relevant to the company's products, how they are regulated, how these chemicals are used and possible alternatives as well as applicable test methods for different materials.

This RSL gives suggestions on how to more concretely set requirements for the various regulated chemicals that are described in the Chemicals Guide, as these proposed requirements are not so concretely specified in the Chemicals Guide. Thus, this RSL is a useful supplement to the Chemical Guide. The use of the Chemicals Guide does not require any prior knowledge of chemistry.

The IT based ChemAct Network tool, <https://chemactnetwork.com/>, specifies relevant, hazardous and often regulated chemicals for each individual component and composition, where this RSL template can also be a useful supplement. The use of ChemAct does not require any prior knowledge of chemistry.

General Requirements for all materials

RevolutionRace sells products world wide. All suppliers to RevolutionRace must be in compliance with regulations in all markets RevolutionRace operate.

List of Chemical Substances Compliance

All suppliers to RevolutionRace, who are process owners, must keep record of all chemical substances used in production and all associated processes. This list shall include name of the chemical product, the purpose/area of use and a reference to a Material Safety Data Sheet (MSDS).

Suppliers can and will be asked to submit this list to the ESG team or an accredited auditor for inspection. The buying and product departments reserve the right to ask for additional documentation, showing the chemicals that have been used during production.

Follow up routines

The standards described in this document are applicable on all orders at all times, valid from the time of written confirmation.

Test methods – Tests according to the latest published European standard (EN) and/or ISO test methods.

In case there is no EN and/or ISO standard available «not yet available» the laboratory used by RevolutionRace, the checklist for lab, annex 18, should be used to ensure the quality of the lab that is used by RevolutionRace.

In case of differing test result, the test performed by RevolutionRace will be valid.

In case of quality dispute; 3rd party documentation will be required. 3rd party test results will not be required unless requested.

General requirement for Chemicals of Concern (CoC)

Substances hazard classified as persistent, bioaccumulative and toxic (PBT), very persistent and very bioaccumulative (vPvB), persistent, mobile and toxic (PMT), carcinogenic, mutagenic and toxic for reproduction (CMR), endocrine disruptors (ED) or equivalent concern must not be present in RevolutionRace products.

Legal background

UN global treaties on certain hazardous chemicals such as Persistent Organic Pollutants (POPs)

UN global treaties on certain hazardous chemicals such as POPs Stockholm Convention on Persistent Organic Pollutants is an international environmental treaty, signed in 2001 and effective from May 2004, that aims to eliminate or restrict the production and use of persistent organic pollutants (POPs).

The Rotterdam Convention (formally, the Rotterdam Convention on the Prior Informed Consent Procedure for Certain Hazardous Chemicals and Pesticides in International Trade) is a multilateral treaty to promote shared responsibilities in relation to importation of hazardous chemicals.

The Minamata Convention on Mercury is a global treaty to protect human health and the environment from the adverse effects of mercury.

EU/EEA chemicals regulations

There is a range of chemicals regulations in EU/EEA that cover requirements of articles and/or chemical products depending on to what extent certain hazardous chemicals pose possible unacceptable risk to users and the environment under normal foreseeable conditions/use.

Such regulatory frame works are

- REACH (EU Regulation 1907/2006) and its amendments
- EU POP regulation (EU Regulation (EU) 2019/1021) and related amendments
- Biocide Product regulation (EU Regulation 528/2012) and its amendments
- Regulation (EU) 2025/40 of the European Parliament and of the Council of 19 December 2024 on packaging and packaging waste (PPWR) and its amendments
- RoHS Directive (2011/65 / EU) restricting the presence of hazardous chemical substances in electrical and electronic equipment

Restrictions (EU/EEA)

Restrictions are regulatory measures to protect human health and the environment from unacceptable risks posed by chemicals. Restrictions may limit or ban the manufacture, placing on the market or use of a substance. A restriction can apply to any substance on its own, in a mixture or in an article, including those that do not require registration. Restrictions setting out conditions for the placing on the market of substances apply to both domestic production and imports.

Duty to inform your customer on substances for authorisation (EU/EEA)

Substances of Very High Concern (SVHC) are listed on Candidate List for authorization of the Regulation (EC) No 1907/2006 (REACH). All professional actors have an obligation to inform their consumers about the content of SVHC (as a minimum the name of the substance(s)) exceeding 0.1 % weight by weight (= 1,000 mg/kg) in individual parts of an article, that are defined as articles. If the consumers are professional actors, there is an immediate information duty, but within 45 days for private consumers.

United States (USA)

The Toxic Substances Control Act of 1976 is a US Federal law that provides US EPA with authority to require reporting, record-keeping and testing requirements, and restrictions relating to chemical substances and/or mixtures. Certain substances are generally excluded from TSCA, including, among others, food, drugs, cosmetics and pesticides.

The official text of TSCA as amended by the Frank R. Lautenberg Chemical Safety Act of the 21st Century is available in the United States Code, from the U.S. Government Printing Office.

TSCA addresses the production, importation, use, and disposal of specific chemicals including polychlorinated biphenyls (PCBs), asbestos, radon, mercury and lead (such as lead based paint).

TSCA restriction: means that the substance is restricted in TSCA.

TSCA assessment: Chemicals that have been designated as a high priority or for which risk evaluation has begun. "Draft Scope": EPA has published a draft scope document for public comment. "Final Scope": EPA has published a final scope document (or problem formulation for the first 10). "Draft risk evaluation": EPA has published a draft risk evaluation. "Final risk evaluation": EPA has completed a final risk evaluation.

California Proposition 65, officially known as the Safe Drinking Water and Toxic Enforcement Act of 1986, was enacted as a ballot initiative in November 1986. The proposition protects the state's drinking water sources from being contaminated with chemicals known to cause cancer, birth defects or other reproductive harm, and requires businesses to inform Californians about exposures to such chemicals.

Proposition 65 requires the state to maintain and update a list of chemicals known to the state to cause cancer or reproductive toxicity.

PFAS regulations in USA – federal and states

For US federal regulations of PFAS, see the following link, <https://www.epa.gov/sdwa/and-polyfluoroalkyl-substances-pfas>

For ongoing and decided PFAS regulations in US states, see the following link, <https://www.saferstates.org/bill-tracker/>

List of Regulated Substances

Table 1 provides a non product specific overview of material relevant regulated chemicals for their possible occurrence in different materials.

Table 2 is an extensive list of hazardous and often regulated chemicals in EU/EEA and USA, with relevance to materials used in RevolutionRace products. It provides

- Latest published CEN/ISO test methods for textiles, leather and footwear
- Suggestions for RevolutionRace company limits to be applied in value chains depending on the RevolutionRace chemicals policy
- Legal status e.g SVHC, restricted etc

Definitions in Table 2

CAS RN – For every substance, the list states the identification number (CAS No) according to Chemical Abstract Services

Severall – Is stated instead of CAS number, the substance has several substances and CAS numbers covered by the specification. In case there is a defined range of regulated substances, these are listed in annexes, 1 to 13.

Detection Limit – Is defined as the lowest possible value that can be found during testing with a specific test method. Whenever test methods have been revised and the detection limit has been changed, the new detection limit must be followed.

The limits of detection (LOD) and quantification (LOQ) are defined as the lowest concentration of the analyte that can be reliably detected and quantified, respectively. Usually the LOD and LOQ refer to the limits associated with 95% probability of obtaining a correct result.

Not Detected – Substance stated with "Not Detected" as a requirement should not be found above the Detection Limit to be reflected in test reports.

Usage ban – When a substance is defined as "Usage ban" this means that the substance should not be present and used during production directly or indirectly through transformation in processes. Those substances cannot be present in the product over the Detection Limit.

Restricted means restricted according to EU/EEA harmonised chemicals regulations.

SVHC means Substances of Very High Concern (SVHC) that are listed on Candidate List for authorization of the Regulation (EC) No 1907/2006 (REACH).

Limit value – Limit values are based on the highest allowed content of the substance per kilogram article or part thereof.

Not yet available – For those chemicals that have no official standard testing method report the method used by the laboratories through *Annex 14 Checklist for laboratories* to answer .

TSCA restriction or assessment: (US Federal Toxic Substances Control Act) of existing chemicals

Prop 65 means that the substance is listed in the Californian Proposition 65.

Annex 10. Legal status formaldehyde

Formaldehyde regulations within EU/EEA are replaced by EU REACH Regulation annex XVII entry 72 for textiles.

Formaldehyde regulations outside EU/EEA

Country	Regulations/Requirements	Objection Limit / Limit
China	Limits of Formaldehyde Content in Textiles: GB18401, Leather: GB/T 19941	Textiles for infants and babies: ≤20 mg/kg. Textiles in direct skin contact: ≤75 mg/kg. Textiles not in direct skin contact: ≤300 mg/kg.
Japan	Japanese Law 112 Textiles: JIS L1041	Textiles for infants: Not detectable. Textiles in direct skin contact: 75 ppm.
Vietnam	Circular no 23/2016/TT-BCT	Textiles for babies under 36 months: 30 mg/kg. Textiles in direct skin contact: 75 mg/kg. Textiles not in direct skin contact: 300 mg/kg
USA	Federal Hazardous Substances Act (FHSA)	The Federal Hazardous Substances Act (FHSA) is a chemicals legislation that does not focus on products but regulates certain hazardous substances in products, such as lead in candle wicks and solvents in shoe waxes. Consumer products containing more than 1% formaldehyde must be labeled with a warning. The following states have restrictions of formaldehyde: California (cleaning products, cosmetics, wood products), Illinois, Iowa, Louisiana, Massachusetts (children's products, jewelry, toys), New Hampshire (children's products, toys), New York (electronics equipment), South Carolina and Vermont (chemical products).
Eurasian Customs Union (Armenia, Belarus, Kazakhstan, Kyrgyzstan and Russia)	Technical Regulation on the, TP TC 007/2011 On "Safety of Products intended for children and adolescents", enacted in 2011 and its amendment "Decision N° 51 (28 April 2017)", enacted in 2017. "TP TC 017/2011 On Safety of Light Industry Products enacted in 2011 and its amendment "Decision N° 60 (9 August 2016)" enacted in 2016. GOST 30386-95 (Textiles. Maximum permissible concentrations of free formaldehyde)	Mass fraction of free Formaldehyde babies up to 36 months: 20 mcg/g for 1st and 2nd layer of products and 300 mcg/g for 3rd layer. Mass fraction of free Formaldehyde for children and adolescents: 75 mcg/g for 1st and 2nd layer of products and 300 mcg/g for 3rd layer. <i>Apply less than 20 mg free formaldehyde/kg as a customs requirement.</i>

Annex 17. Aryl phosphates

Substance	CAS RN	Legal status
Trixylyl phosphate	5155-23-1	SVHC
Triphenylphosphate	115-86-6	SVHC TSCA assessment
0,0,0-triphenyl phosphorothioate (TPPT)	597-82-0	SVHC
Reaction mass of: triphenylthiophosphate and tertiary butylated phenyl derivatives	192268-65-8	SVHC

Annex 18. Checklist for laboratories

Introduction

This routine is to ensure qualified chemical test protocols and test results by selected and by RevolutionRace, approved accredited independent test laboratories in selected countries of concern.

If there are published EN or EN ISO or ISO methods available always use that method and clearly report in the test protocol

If other methods are used e.g. in-house test methods, always answer carefully each section below.

In case the applied EN, EN ISO or ISO method is modified by the test laboratory, always report these modified procedures in the test report.

All test reports should be signed by an authorised person at the laboratory.

Testing

For those chemical substances to be tested, where no official international standard test method exists, the test report should include the following:

Sample preparation

- Amount of specimen for preparation, weight and size
- Procedure of extraction, solvents used, and equipment used for extraction e.g. Soxhlet

Instrumental performance

- Instrument used e.g GC-MS etc.
- Lab specific detection limit(s) where preferably LOQ (limit of quantification) are reported
- Standard deviation in analytical results

Other information of importance

- Describe modified procedures from applied established ISO/EN standard methods if available.
- Always present test results in mg/kg
- Description of the recalculation from mg/kg if the test result is presented in another unit e.g ppm, ppb, ug/kg etc

Instruction to the laboratory

- Always present the actual test result of the analysis and not any letter combinations if not properly described e.g N/A
- If not detected, report always below the actual LOQ (< LOQ) values
