SD-WAN

Serious speed, serious security. Seriously.

Securely connect multiple offices with SD-WAN from Shaw Business.

Network connectivity that won't quit

- Lower your operational costs, improve your broadband resource usage and ensure high performance of critical applications over a robust connection.

- Intelligent path control means traffic can be rerouted and optimized in real time, allowing optimal bandwidth usage.

- We've got our priorities straight—your business-critical traffic gets priority with dynamic path selection based on loss, latency and jitter as well as policy-based routing.

You better believe we've got your back

- We don't kid around when it comes to security. Cloud-managed software automatically pushes security updates and uses multi-layer architecture encryption to keep your network safe and data secure.

- Downtime is a downer. Multiple Internet links and seamless LTE failover ensures continuity while routing traffic to other links in the case of an outage.
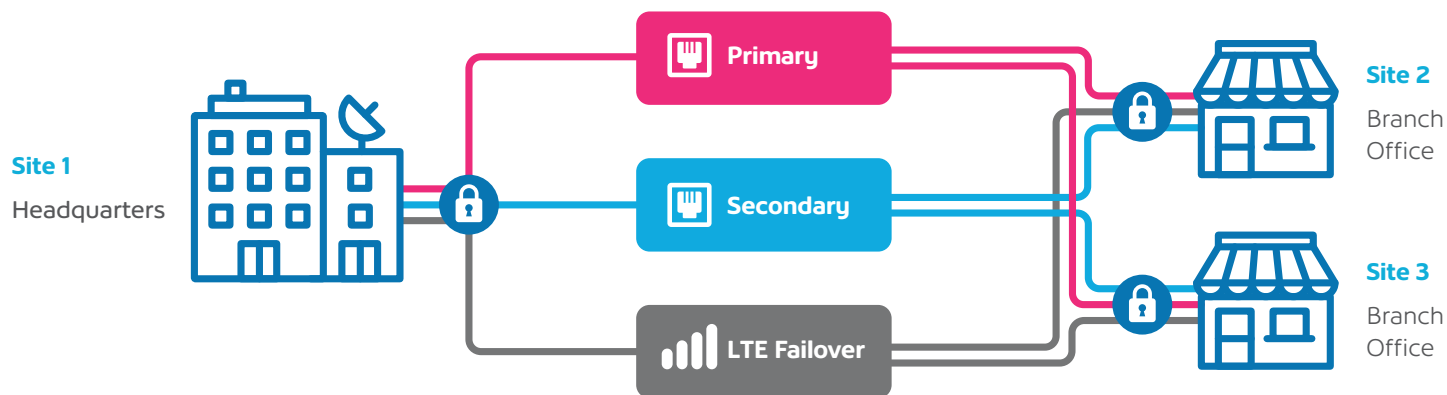

Centralized cloud management? Too easy

- Stay in control while on the go. Manage your network and settings from anywhere* using an intuitive online dashboard.

- Easily deploy and manage branch offices with intuitive and scalable VPN site connectivity.

Get the network connectivity you deserve. Software Defined WAN (SD-WAN) provides knockout connectivity for multi-site businesses that require network security, visibility and analytics.

Three pathways of connectivity

1 Protect your network with enhanced network security. All sites are connected over broadband links protected by SmartSecurity.

2 Intelligent path control with automatic failover.

3 Centralized multi-site management.
