

# We'll keep an HD eye on things.

SmartSurveillance gives you access to cloud-based security cameras, professionally installed with secure encryption.

## Security, meet flexibility

- Professionally installed HD cameras that are encrypted and work without additional software or expensive servers. Nice.
- SmartSurveillance fits to your business. You can adjust footage quality and recording settings as your needs change.

## Stay ahead of threats. Way ahead

- Manage your cameras and settings from anywhere\* using an intuitive online dashboard—the same one that's used to manage SmartWiFi and SmartSecurity services.
- Seamless cloud software updates are automatically pushed to your connected SmartSurveillance cameras.

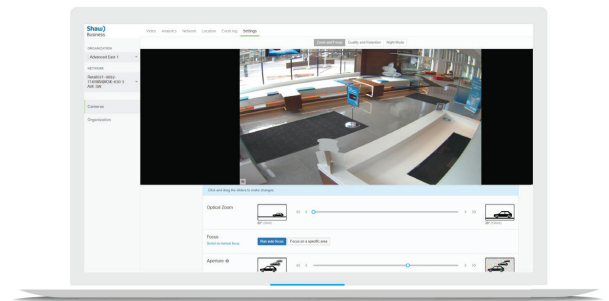

## Say hello to motion-based magic

- Motion heat mapping and people-counting technologies allow you to optimize your merchandising and business strategies based on activity patterns inside your business.
- Motion Search lets you quickly hone in on a particular area of interest and glean activity within that area, saving you time from reviewing lengthy footage. Phew.

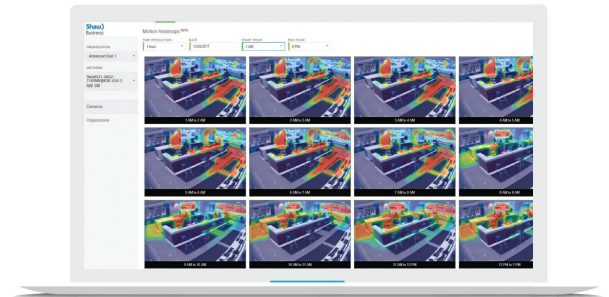

## A sneak-peek at your Online Portal

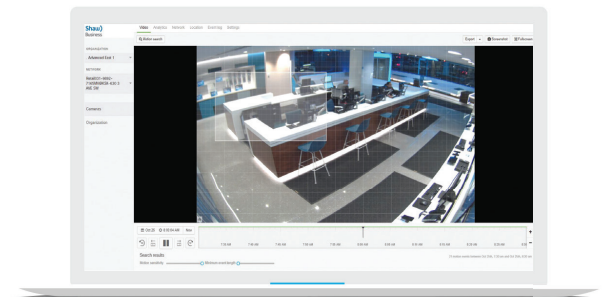

Easily view streaming video and create video walls for monitoring key areas of your business.

Motion heat mapping allows you to see activity patterns in your business over time.

Motion Search within a specified timeframe allows you to zoom in to see activity in the area of your choice.

Object Detection allows you to narrow down your search to detect people and vehicles (bikes, cars and trucks) in the camera's field of view.

Shaw Business Internet or SmartWiFi is a required service to have SmartSurveillance. An Internet or WiFi connection is needed to use certain SmartSurveillance product features.
