Material used (%)

Steel Aluminium Paper Plastic Other

The GWP¹ across the life cycle is 56 kg CO₂e

This is similar to the CO₂ produced from a road trip with a diesel mid-range car from Hannover to Wuppertal

¹ Carbon dioxide equivalent (CO₂e) is the universal unit of measurement to indicate the global warming potential (GWP) of each of the six greenhouse gases, expressed in terms of the GWP of one unit of carbon dioxide. It is used to evaluate releasing (or avoiding releasing) different greenhouse gases against a common basis.

Description

The EHD9000 is a cast iron closer for all institutional applications. It comes with self-regulating valves that significantly reduces the need to adjust the door closer in fluctuating temperatures and high-traffic areas. Front-facing spring force adjustment including springsize indicator, and valves for adjustment of hydraulic functions. It utilizes a robust dual clamp fit cover design that strongly secures the cover on both ends.

Total Global Warming Potential per life cycle stage (kg CO₂e)
