I'm Pyry, a UX/UI designer with 10 years of experience from the design industry. Problem solving, user interfaces and functional but beautiful design are at the core of my work. Achieving a better knowledge of the latest technologies and understanding the end users' needs are the areas where I'm always trying to develop my skills further.

My experience in advertising and digital design have shaped my professional identity towards creative problem solving, while working in software development and as a freelancer have provided insight and empathy towards the clients and end users.

of Applied Sciences
Student exchange 6 months

2011

Metropolia University of Applied Sciences Graduation (BA)

LANGUAGE SKILLS

OTHER SKILLS & KNOWLEDGE

Constant learning

Understanding changing technology and world demands constant self-education. I find reading the most suitable way for myself but seminars, online courses and events provide good insights as well.

Teamwork with developers

The best results appear when everyone in team can share their ideas openly. Eventhough I'm not a developer I've come to know possibilites and limitations of code quite well while working in different, multidisciplinary teams.

Workshops

Getting the most out of the client workshops seem to happen while working tightly with your designer or developer friend and helping stakeholders to find correct answers to right questions.
