The name is Pyry Nousiainen and currently I'm working as a digital product designer. User interfaces and responsive design have intrigued me a long time and what I enjoy the most is minimal and clean design, yet informational and user friendly. Achieving a better understanding of the latest technologies and customers' needs are the areas where one can always develop skills further.

Empathy towards end-users and understanding their motives have become more important after moving to world of user experience design. My work experience and professional identity come from advertising agencies, a digital design agency, a software company and working as a freelance designer.

OTHER SKILLS & KNOWLEDGE

Constant learning
Understanding changing technology and world demands
constant self-education. I find reading the most suitable way
for myself but seminars, online courses and events provide
good insights as well.

Teamwork with developers
The best results appear when everyone in team can share their
ideas openly. Eventhough I'm not a developer I've come to know
possibilites and limitations of code quite well while working in
different, multidisciplinary teams.

Workshops
Getting the most out of the client workshops seem to happen
while working tightly with your designer or developer friend and
helping stakeholders to find correct answers to right questions.
