Andrew Nater

SUMMARY

I have a decade of experience in front-end development, user interface design, and entrepreneurship. While studying at UCF, I worked as a technician for Apple and co-founded Trim Media, a design consultancy. After graduation, I worked as a software engineer at Wyndham. I left in June 2017 to co-create Wellness, a mental health tracker for iOS. Today I'm a front-end developer at Full Sail University, working on their learning management system.

EDUCATION

Digital Media B.A. Web Design, University of Central Florida, 2015
Associate in Arts, General Studies, Valencia College, 2012

EXPERIENCE

Full Sail University | Front-end Developer | May 2018 – Today

I maintain the front-end for a learning management system serving thousands of students and faculty. The app is built with React, state is managed with Redux & Immutable.js, and code is tested with Jest.

I work with product managers, business analysts, and designers to capture requirements and share progress on projects. I participate in code review, estimation & planning, and interviewing.

I introduced tests to the front-end codebase. I improved the app's overall accessibility. I build prototypes for new projects, including a React Native app and an analytics server. I created front-end interview code challenges and on-boarding documentation.

Wellness | Co-founder, Designer, Developer | June 2017 – Today

I co-created and maintain Wellness, a mental health app. I do everything from support and bug fixes to releasing App Store builds and analyzing sales figures.

I built our app server (TypeScript, Node.js, Express) and marketing website (HTML, CSS, JavaScript, React). I develop UI code for the iOS app (Swift, UIKit, PaintCode). We use Jira for tracking issues and planning releases.

I design UI for the iOS app and marketing materials with Sketch and Adobe Creative Suite (Photoshop, After Effects, Illustrator).

Andrew Nater

Wyndham Vacation Ownership | Software Engineer | January 2016 – June 2017

I maintained and documented front-end code for a suite of internal and customer-facing web applications. Projects were built with HTML, CSS, and JavaScript (using jQuery & React). Code was version controlled with TFS.

I documented requirements with Microsoft Office suite. I designed wireframes, user experience diagrams, and user interfaces with Adobe Creative Suite.

I conducted code reviews, attended daily stand ups (SCRUM), and provided direction to the offshore development team.

Trim Media | Co-founder, Designer, Developer | May 2012 – April 2016

I developed fast-loading websites for clients in HTML, CSS, and JavaScript. I wrote back end code in PHP, Ruby, and Node.js. I managed web hosting and domain registration for clients with various providers.

I designed brand collateral, stationary, graphics, wireframes, user experience flows, and websites. I conducted design reviews and usability testing. Deliverables were created with Adobe Creative Suite.

Apple | Genius (Mac Technician) | July 2010 – May 2015

I provided customer support, troubleshooting, and hardware repairs for Apple Mac, iPhone, iPad, and iPod products. I maintained above-average customer satisfaction (NPS) scores.

I collaborated with coworkers and leadership to develop key initiatives that improved the customer and employee experience. I also provided training and mentorship to coworkers.
