

## Dairy's Time Bound Plan (TBP) & Progress

- Our dairy operation in Malaysia uses palm oil in the manufacture of fat-filled milk powder. The state-of-the-art facility in Port Tanjung Pelepas opened its first spray drying facilities in 2012 with a capacity of 24.000 metric tonnes per year. In 2014, dry blending facilities providing value added products were added. The newest spray drying plant being commissioned will add another 40'000 metric tonnes of production capacity.
- As well as supplying our customers with highest quality products, we are supporting to production of sustainable palm oil. We obtained the RSPO certification in December 2021. In 2022, 20% of our palm oil volumes were RPSO certified. We aim for a steady annual increase to build a stable supply chain and secure 100% RSPO certified volumes by 2025 at the latest.
