

Peanuts

OFI is a proud supplier of various USA peanut products. We offer a wide range of capabilities and customization to meet our customers' needs.

Sourcing

All of our peanut ingredients are prepared from U.S. origin, high quality USDA grade Runner, Virginia or Spanish-type peanuts.

Processing

We specialize in toll processing which includes precleaning, remilling, and blanching. With over 40 years experience and proprietary technologies, we are the industry leader in foreign material removal and maximizing yield and quality.

As a custom, made-to-order processor, we produce specialized peanut ingredients, including: dry roasted peanuts, dry roasted peanut granules, and peanut butter/paste/variegate. Our R&D/Innovation team creates customized solutions to meet the customers' needs.

Our 4 processing plants are located in the USA & are strategically located across the Southeast Growing Region, the Virginia/Carolina Growing Region, & the Southwest Growing Region

Market Report

This report is packed full of essential global market information, crop updates, key insights, must-read data, trends/factors and much more! Written by our Product Line Managers, our market report helps you stay up-to-date with the ever-changing nuts market!

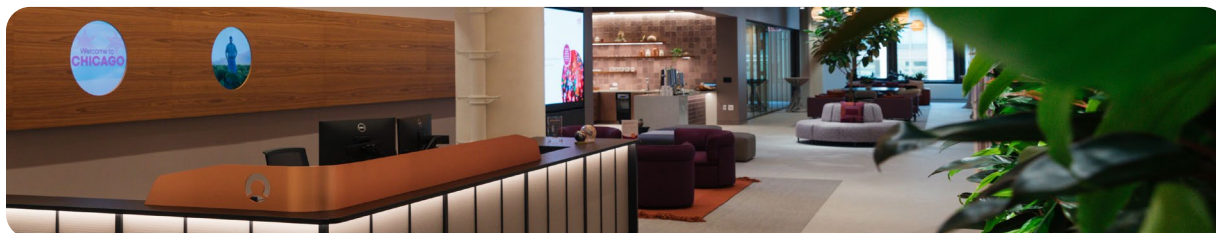

Did you know?

Peanuts have a light water footprint due to their specific growing regions, relatively compact size, & underground fruiting capabilities. As peanuts are a limited biomass crop, the plant does not have to feed a significant amount of foliage as compared to some other crops, such as tree nuts. They also require minimal irrigation compared to other nuts & give back to the soil by enriching it with nitrogen content.
