

# Almond

We are one of world's largest growers of almonds with extensive orchards in **both the southern and northern hemispheres**, offering year-round fresh almonds to customers worldwide.

## SOURCING

As an almond grower and processor with orchards in both Australia and California, we provide all major varieties, including Non Pareil, Carmel, Price, Sonora, Buttes and Monterey.

Our highly mechanized farms utilize the latest irrigation infrastructure and technology, and our agronomy practices produce maximum yields, productivity and superior quality almonds. Sensors in our almond trees combine data from the tree trunks, drip line flow, and soil/weather predictions to track growth. The system helps anticipate and plan irrigation requirements.

## PROCESSING

Our USA operations are fully integrated following the acquisition of Hughson Nut Inc. in 2019. We offer custom almond ingredients through our processing plants in California and are equipped to complete orders to customer specifications and ensure product safety.

Our blanching and ingredient processing facility in Vietnam, conforms to the world's highest food safety and quality standards. Roasting is undertaken on variable capacity lines capable of processing different grades of almonds with consistent flavor, aroma and texture.

## CERTIFICATIONS

## SUSTAINABILITY

As an almond ingredients supplier we are committed to reducing our environmental footprint and supporting the communities where we operate. We partner with the Almond Industry Boards of both Australia and California, to actively participate in industry leading sustainability initiatives and best practices.

We've long invested in sustainable practices across our almond farming operations, like state-of-the-art irrigation and creating pollinator habitats with bee-friendly plants. In efforts to deliver even more transparency and impact by setting public targets and sharing our data and insights, we launched our **Almond Trail** in 2022. This trail outlines of our ambitious targets for water stewardship, carbon reduction and support for communities and ecosystems, including a commitment to reduce greenhouse gas (GHG) emissions in line with achieving a 1.5°C pathway – all by 2030.

Our **Impact Report** highlights our progress on each of our trail's 2030 goals and provides a deeper look into our various programs throughout different origins that support the communities and industry.
