What Is Logic Rails?

Logic Rails is an automated, web-based puzzle creation tool designed to generate Train Track logic puzzles. In these puzzles, solvers use numerical clues along the rows and columns to reconstruct a continuous railway route across a grid layout.

Unlike general design apps or complex software that requires monthly subscriptions and technical setup, Logic Rails operates entirely inside your web browser. There are no API keys, tokens, or extra monthly fees to worry about. With just a few clicks, you can batch-generate original puzzle layouts complete with automated clues and accurate answer keys ready for print or digital download.

Key Features & Core Highlights

1. Automated Train Track Puzzle Generator

Forget manually placing tracks or double-checking clue numbers. Logic Rails automatically handles the heavy math, calculating precise row and column clues for every generated route so every puzzle has a single, 100% accurate solution.

2. Batch Generation Up to 100 Puzzles

Instead of making puzzles one by one, you can generate up to 100 unique puzzles and matching solution keys in a single batch. This means you can build an entire 100-page book interior in a matter of minutes.

3. Open Route & Closed Loop Game Modes

Logic Rails offers multiple structural puzzle styles:

- **Open Route Mode:** Players connect train tracks from a defined start point to an end point.
- **Closed Loop Mode:** Solvers must form a continuous, seamless railway loop.

4. Multiple Grid & Book Trim Sizes

To cater to different audiences—from young kids to adult logic enthusiasts—the software supports 6 grid sizes ranging from 6x6 (easy/beginner) to 15x15 (hard/advanced). Additionally, it supports standard book trim sizes, including **6x9**, **8x10**, and **8.5x11** inches.

5. Crisp, High-Resolution SVG & PDF Exports

The generated graphics are exported as vector-quality SVG files and print-ready PDF interiors. They maintain crisp lines whether printed on KDP paperbacks or downloaded as digital Etsy printables.

6. Commercial Rights Included

Every puzzle, collection, and printable page you generate comes with full commercial rights. You keep 100% of your earnings across self-publishing stores and marketplaces.
