

Power Purchase Agreements (PPAs)

If you generate your own electricity, we can set up a Power Purchase Agreement (PPA) and buy what you don't need. If you generate renewable electricity, you can add to this income stream by selling renewable energy certificates too.

PPA triple-play

To optimise your generation asset(s) and maximise your revenues, Haven Power offers three types of PPA, each addressing your unique needs as a generator:

1. Fixed price

If you want budget certainty and your generation is predictable, or proven with past data, this may be the most suitable choice.

Fixing gives you the full value of the agreed p/kWh unit rate, plus we pass through the embedded benefits at agreed rates, for the lifetime of your contract, paid to you monthly.

2. Flex

This option pays a percentage of the embedded benefits, has a variable unit rate, and allows you to trade power on wholesale markets when prices meet your requirements.

Your generating technology and site-specific usage determines our imbalance and shape fees.

3. Spill

This is a variable-volume weighted price based upon the System Sell Price that's ideal if your generation relies on intermittent sources. It's also suitable when:

- i. you're unsure about your output
e.g. you have a new installation;
- ii. you only generate to:
 - a. take advantage of ancillary services;
 - b. avoid the high-cost Triads, each winter's three most expensive settlement periods.

With a Spill PPA, you get a percentage of both the rate per kWh and the embedded benefits.

What are the benefits?

Contract flexibility

In addition to your choice of Fixed, Flex or Spill PPA, you can also discuss a range of contract lengths with us. However, we'll first need a better understanding of your existing and planned generation volumes, and whether they involve solar photovoltaic, Combined Heat and Power, wind, or other technologies.

More income and a PR boost

If you generate renewable energy and receive Renewables Obligation Certificates (ROCs) and Renewable Energy Guarantees of Origin (REGOs) – the UK equivalent of the EU member states' Guarantees of Origin (GoOs) – we can buy them from you. This can provide you with additional income streams.

The number of ROCs received for each MWh of electricity produced depends upon your generation technology and its age (newer technologies attract more ROCs). A REGO proves that you're generating electricity from renewable sources, which has the potential to help you get positive media coverage. You receive one REGO for every MWh generated and you can sell it to us alongside the electricity itself.

What sorts of generation qualify?

We can work with you on a PPA for a range of generation technologies, including:

- Anaerobic digestion
- Back-up generators
- Biomass
- Combined Heat and Power (CHP)
- Energy from waste
- Hydro
- Landfill gas
- Sewage gas
- Solar Photovoltaic (PV)
- Wind

What's next?

Why Haven Power?

With over 12 years' experience in the energy industry, Haven Power has developed a deep understanding of the varying needs of customers and brokers.

Working with all sizes of business from a range of industries, we take account of differing energy requirements, budgets, attitudes to risk, and more.

And we combine this experience and expertise with a commitment to service, ensuring that we keep energy simple and always put the customer first.

A better use of energy
