

Environment and Biodiversity Policy

Pilgrim's is committed to the responsible stewardship of the natural resources required to produce our products and feed millions of families around the world. Our stewardship efforts focus on doing more with less by maximizing our efficiencies and incorporating best practices into our day-to-day activities and across our operations. Through the implementation of environmental management programs and continually improving environmental performance at our facilities, we strive to prevent pollution and protect the environment. All our operations are managed in accordance with environmental laws and regulations.

Our vision is to be an industry leader in sustaining air, water and land by minimizing the resources needed to produce quality food products and reducing the waste generated during our production processes. We continuously strengthen our environmental commitment and evolve our approach to meet new demands, while meeting the needs of our team members, customers, stakeholders and the communities in which we live and work. We promote a model of continuous improvement and recognize that environmental protection, natural ecosystems and biodiversity, and resource conservation provide value and security to current and future generations.
