## Discovery insights from... Dr. Mohit Agarwal

### 1. Please briefly describe who you are and your role?

I am a full-time faculty member at the division of Neuroradiology at the Medical College of Wisconsin in Milwaukee and Director of the Neuroradiology fellowship at the institution.

### 2. What problems were you attempting to solve when you started using STATdx?

My work involves teaching Neuroradiology trainees every day. When discussing a particular disease entity on a case at the workstation, I wanted to use a resource that could provide me with comprehensive information on that case with diagrams and could list important differential diagnosis with teaching images.

### 3. From your point of view, what are the biggest benefits you found in using STATdx in your day to day routine?

I find STATdx to be a great resource for teaching at the workstation. Pulling up teaching images with all possible features and examples of a disease entity and demonstrating the differences between similar diagnoses with a few clicks while discussing a teaching case with trainees has been the biggest advantage for me.

### 4. What's the primary reason you would recommend STATdx?

Getting a quick review of a disease process and using the vast number of case examples for teaching are the primary reason to recommend STATdx to teaching institutions.

### 5. Is it important in your daily clinical activity to have diagnostic support tools?

Working in a tertiary care specialized center with high case complexity, access to diagnostic support tools is of importance to us.

*I find STATdx to be a great resource for teaching at the workstation.*
