Discovery insights from... Dr. Sonia Intezar

1. Please briefly describe who you are and your institution?

I am Dr Sonia Intezar, a Trust Grade Doctor working in General Medicine at Plymouth University Hospitals NHS Trust UK.

2. What was life before you had ClinicalKey?

Before ClinicalKey I was relying on Trust Guidelines and NICE Guidelines which are not in-depth and most of the topics are usually not available. When I was working on the ward, I was interested in diseases, I would read about them and then reflect later on. I believe ClinicalKey offers a better knowledge of topics; it also opens the textbook version of the topic which is amazing.

3. What three benefits have you experienced since using ClinicalKey?

- 1 - Topic summary easily available on the app.
- 2 - The textbook links / in depth topic reviews. I believe these are the best thing about ClinicalKey.
- 3 - CPD points you get while browsing / reading about topics.

4. How do you use ClinicalKey in your day-to-day workflow?

As mentioned above, I use Clinical Key topic summaries in my day-to-day clinical use on the wards.

5. If you had a colleague who was considering ClinicalKey, what would you tell them?

I would highly recommend ClinicalKey to my colleagues due to the easy availability on the mobile app and find it very useful to read while preparing for exams.

I believe ClinicalKey offers a better knowledge of topics (than competitors); it also opens the textbook version of the topic which is amazing.
