# ClinicalKey discovery insights

Dr. Juanjo Paterna

I am Juanjo Paterna, a physician specializing in Family Medicine, working at the Centre d'Atenció Primària Pineda de Mar in Barcelona, Spain. I care for approx. 1300 people, visiting them at the centre or doing home visits. Sometimes, I also work on-call at the emergency healthcare centres in my area.

## What problems were you attempting to solve when you started using ClinicalKey?

ClinicalKey was introduced to me 5 years ago when I began my residence, as a clinical resource mainly used to look for information. Our institution had and still has a subscription for it.

Nowadays, being a specialist, I usually use ClinicalKey for multiple tasks including:

To check diagnostic criteria or procedures, to learn about specific exploratory manoeuvres and how to do them and to evaluate the most useful treatment and alternative approaches. I also use it to look for books and check new articles.

## From your point of view, what are the biggest benefits you found in using ClinicalKey in your day to day routine?

I think that the biggest benefit is having an updated resource with evidence-based quality content, it can give you confidence in managing the daily complex cases that you can encounter on the job.

## Individual subscriptions now available

Experience ClinicalKey AI free for 14 days.

## What's the primary reason you would recommend ClinicalKey?

I would recommend it because it gives you confidence and agility in managing the daily workload, saving time and reducing the times you need to consult with another specialist. I think it also gives the patient more satisfaction because you can give them an answer without delaying the diagnosis or treatment.

## Is it important in your daily clinical activity to have access to diagnostic support tools?

It's fundamental to have diagnostic support tools to provide a good quality medical attention. It can reduce iatrogenic risks, saves costs by reducing unnecessary tests, and saves time in finding the right approach for the patient's treatment.

*"I would recommend ClinicalKey because it gives you confidence and agility in managing the daily workload."*
