

Empower *curriculum innovation* with trusted and evolving digital resources

Supporting student success is a high priority for many institutions, with 98% of library directors saying helping students develop research, critical analysis and information literacy skills is important.

While the education mission may be clear for institutions, the research environment is far from being so for students. They face an increasingly complex landscape to navigate, struggling to know where to start and what to trust.

Libraries now have a crucial role to play in ensuring that students have the confidence, skills and resources to succeed in their studies and beyond.

Enable educational excellence at your institution by providing content that can:

- Support seamless classroom, distance and hybrid learning
- Enrich courses with interdisciplinary perspectives
- Enable project-based learning
- Integrate easily into lesson plans and LMS platforms

"I use a lot of content from ScienceDirect for my students to provide them insights about recent theories/practices. It helps develop their research skills, content development skills and writing skills."
