

PRODUCT DESCRIPTION:

Celonis Training Cloud

Cloud Service

The Celonis Training Cloud enables you to become a business and technical expert in Celonis Process Mining. By online courses within our Celonis Learning Management System (Celonis LMS) for Celonis Viewers, Analysts and Data Scientists, you can expand your knowledge across all domains of application within Celonis. Due to continuously updated training contents, you permanently stay at the cutting edge of the newest process mining functionalities and applications. Furthermore, by obtaining access to our Celonis Training Application, you can directly work on demo data within the Celonis Process Mining software to check your progress and work on exercises. Besides working in the Celonis software, you can directly work on raw data and transform it into the Celonis target format.

1. Feature Overview

The Celonis Training Cloud allows access to two online applications. First, by accessing our online learning management system (Celonis LMS), you can attend structured online courses with manifold explanations and videos regarding Celonis Process Mining. Second, by logging into our Celonis Training Application, you can navigate directly within the Celonis Process Mining software, transform raw data, work on exercises and check your progress. The following features are included:

Feature	Description
Structured role-dependent online courses	Depending on the course you choose, a structured learning path enables you to become an expert within your role step-by-step. Accessible courses include the Viewer Online Training, Analyst Online Training, Data Scientist Online Training as well as potential update trainings conveying new functionalities and features.
Education videos	Up-to-date training videos outline all key elements, functionalities and applications within Celonis Process Mining.
Continuous progress review	The progress review continuously displays your current status with respect to the chosen learning path.
Interactive exercises	Interactive exercises help you to check your progress and understanding of the training contents. The exercises are structured with respect to the learning path.
Access to Celonis Training Application	Access to our Celonis Training Application allows you to not only watch the education videos, but parallelly work with Celonis Process Mining on demo data for best learning experience.
Preconfigured analyses	Preconfigured analyses teach you how to work with existing process evaluations and how to create interesting use cases.
Limitless training consumption	You can watch the training videos repeatedly, ensuring that you fully understand all concepts of Celonis Process Mining.

2. Two Options for Enablement

The Celonis Training Cloud Business Edition comprises all Celonis front end trainings (Viewer and Analyst Online Training) as well as upgrade trainings. The Celonis Training Cloud Professional Edition includes also the Data Scientist Training as well as upgrade trainings.

Business Edition

Includes:

Viewer Training

Analyst Training

Professional Edition

Includes:

Viewer Training

Analyst Training

Data Scientist Training

3. Training Description

The courses are designed as a fully autonomous online training providing the participant with access to the Celonis Training Cloud for 1 year. **Viewers** can access existing analyses and flexibly investigate the process as well as the connected data in order to detect crucial patterns and process inefficiencies and hence gain valuable insights for process improvement. Therefore, besides having basic process expertise, a Viewer needs to be intimately acquainted with the analytical functionalities of Celonis Process Mining. The training teaches the participants how to use Celonis Process Mining and how to get the most out of an analysis in order to derive and export precious findings.

The Viewer's work builds upon the analyses established by the Analyst. An **Analyst** not only has the possibility to navigate through existing analyses, but to also modify them and create new ones from scratch. Thus, he or she has to be familiar with the analysis functionalities and their configuration. It is an Analyst's aspiration to understand the process he or she is dealing with and to apply all of Celonis Process Mining's capabilities in order to configure appealing, comprehensible, user-friendly, and target-oriented analyses.

A Celonis **Data Scientist** is an expert and allrounder at the same time: He or she is familiar with the connection of new processes as well as the creation and evaluation of analyses in Celonis Process Mining. The Data Scientist education comprises all elements of the Viewer and Analyst training and enhances these contents by all necessary knowledge beyond. While the first part of the training deals with the connection of a process and the setup of a Celonis data model, the second part consists of a case study in which participants can repeat all necessary steps on their own.

4. System Requirements

You can access the Celonis Training Cloud by using a common up-to-date web browser on your personal computer, mobile or tablet. For consuming the online contents in the Celonis LMS and working in the Celonis Training Application, internet access is required.
