PRODUCT DESCRIPTION:
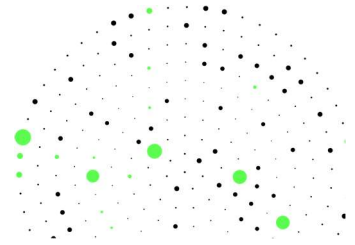

Celonis Content Store

The Celonis Content Store is a Celonis customer platform, which enables the User to access and download pre-configured content to be used in Your instance of Process Mining by Celonis. The Content Store allows the User to search for applications by IT-system (e.g. SAP, Oracle, ServiceNow or Salesforce), by process (e.g. Purchase-to-Pay, Order-to-Cash, Accounts Payable or Accounts Receivable) or by use case (e.g. efficiency, reliability or compliance) to find the most suitable analysis.

1. Feature Overview

FEATURE	DESCRIPTION
APPLICATIONS	Pre-configured analyses, including a variety of visualizations and KPI calculations, can be downloaded by process, imported to Your Process Mining by Celonis instance, connected with their respective data model.
COOKBOOKS	Each analysis comes with a Cookbook. This document guides the User through the analysis, helps to interpret results and includes general best-practices.
DATA MODELS	Pre-configured data models, including all relevant tables and the relations between tables for a given process can be imported to Your Process Mining by Celonis instance and connected with a database.
TRANSFORMATIONS	Pre-defined transformations enable the transformation of raw data into event log format for a given process, which can be read by Process Mining by Celonis to visualize processes.
NAME MAPPING FILE	Overview of all text components used in the Content Store analyses for a given process. By adjusting or adding the text components in this file, they will be updated throughout all Content Store analyses for that process.
TABLE REQUIREMENT FILE	Overview of all tables and fields necessary to run the transformation, data model and analyses for a given process.
ACCESS TO CELONIS CONTENT STORE WEBSITE	Access to our online Celonis Content Store platform allows the User to search for current as well as new analyses.
