celonis ✕ 🐢 Symbio

Your future-proof platform for Process Intelligence

Our customers are reaching out to us as ARIS faces an uncertain future due to Software AG being dismantled.

ARIS already lost its automation capabilities and connectors to third-party systems when Software AG's integration layer was sold to IBM. But news is spreading that an auction for ARIS is planned for this coming spring. This means a lot of uncertainty and risk for the customers who relied on ARIS for years.

Celonis meets Symbio: Drive end-to-end process improvement with one platform

Celonis recently acquired Symbio to combine institutional knowledge about how your business should operate with best-in-class process intelligence in a single platform, making it the most powerful single vendor of process mining and modeling on the market.

Three reasons for Celonis

1

Single vendor

The Celonis platform enables your employees to collaborate in a single solution that unites comprehensive process models of your entire enterprise, process mining, and automation. You can add data from third-party systems and gain an end-to-end understanding of how your business operates.

2

Innovation-driven

Symbio and Celonis are innovation leaders, driving cutting-edge technologies such as generative AI to accelerate process modeling and disrupt the antiquated old way of modeling.

3

Easy migration and reduced cost of ownership

It's easy to migrate your entire ARIS data into the Celonis platform system and simplify the database structure. We can merge all of your databases into one to reduce the administrative effort — and ultimately, your operating costs.

Unlock Process Intelligence for everyone

Process Designer	Plan, define, and optimize your business

Create a digital twin of your organization

Build an enterprise map where your business and IT share a common view of the current and target state – from business processes to customer journeys, enterprise architecture, and org structure

Get an instant process model using generative AI

Jump-start your modeling efforts with suggestions made by generative AI that factors in context on how your business operates

Theory meets reality

Overlay process mining analysis onto your target state models to identify gaps and test & validate changes

Keep stakeholders informed

Create and share detailed standard operating procedures and work instructions at the press of a button

Process Navigator

Roll out process models across your organization

Organizational structure and goals

Quickly find process-relevant connections, goals, resources, and team members

Real-time process support

Ask an AI chatbot to find the next process steps, further process insights and KPIs, and optimization recommendations

Process Cockpit

Annotate your process models with live transaction insights to deliver full transparency

Consistent quality and onboarding

Ensure adherence to best practices across the organization by providing up-to-date information. Onboard employees easily and keep them informed

Single source of operational truth for every employee

Provide all of your employees with personalized access to relevant information, updates on changes, and context within the wider organization
