

PRODUCT DESCRIPTION:

Celonis Digital Consulting Platform

The Celonis Digital Consulting Platform enables You to manage Your consulting projects, in which You leverage the Celonis Intelligent Process Mining technology. The platform allows You collaborate with Your colleagues, tracks the current status of Your project and provides You with an overview of all running digital consulting projects.

1. Feature Overview

The Celonis Digital Consulting Platform is a self-service portal offering the following features:

Feature	Description
Named User	A Named User describes a personalized password protected account for access to the Celonis Digital Consulting Platform. A Named User may only be used by one single natural person designated by name. Any Named User having access to the Celonis Digital Consulting Platform can purchase Process Blocks for the specific consulting projects of that Named User.
Company Account	A Named User is always associated to a Company Account on the Celonis Digital Consulting Platform, i.e. the company at which the User is employed.
Process Block	Process Blocks enable You to analyze Your client's business processes utilizing the Celonis Intelligent Process Mining technology. One Process Block enables You to analyze one Named Process at a specific client over three (3) months. A Named Process implies that it cannot be switched during the subscription term of 3 months. A Process Block incorporates all functionalities of the Celonis Intelligent Process Mining technology as described in the product description of Celonis Intelligent Process Mining except the Transformation Center. A Process Block can be purchased via the Celonis Digital Consulting Platform by requesting or extending a Project Environment. To purchase a Process Block, You need to hold a valid User Subscription to the Celonis Digital Consulting Platform.
Project Environment	A User can request or extend a Project Environment for client projects via the Celonis Digital Consulting Platform, which will be associated to the Company Account to which the User is related. According to the User's needs, one or more Process Blocks can be stacked to constitute a Project Environment. For instance, a Project Environment for a specific client can contain two (2) Process Blocks to analyze 2 processes over 3 months. Upon expiration of the associated Process Blocks, the Project Environment will be archived. Upon activation of a new Process Block, an archived Project Environment can be reactivated.
Project Overview	The Celonis Digital Consulting Platform provides an overview over all requested, running and archived Project Environments that are associated to a Company Account, i.e. a User can see all related Project Environments. However, only the User, who requested or extended the Project Environment gains access to the Project Environment and can invite other Users, when they themselves hold a valid User Subscription to the Celonis Digital Consulting Platform.
Data Volume	We ensure a data volume that is large enough to cover the reasonable needs for the analyses of Your client's business processes up to 256 GB per Process Block.
Enablement Material	The Celonis Digital Consulting Platform provides access to a wide range of Enablement Material, e.g. technical trainings that may be shared with clients.

2. System Requirements

You can access the Celonis Digital Consulting Platform by using a standard, up-to-date web browser on Your personal computer, mobile, or tablet. For logging into the Celonis Digital Consulting Platform, internet access is required.
