Celonis for Business Process Management

Process Mining, BPM, and AI under one roof

celonis

AkzoNobel
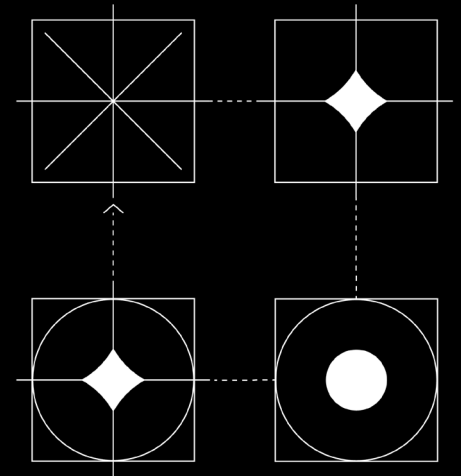

"With Celonis Process Management and the Process Adherence Manager, we can close the gap between target and current processes to better standardize and carry out our processes. Celonis therefore ensures better compliance, cost-effective processes, and will also facilitate our SAP S4 transformation."

Christian Wittenberg
Head of Architecture

Classic BPM falls short

As a BPM expert, your focus is clearly on process optimization. There's often a disconnect between design and reality, though. Because instead of sticking to process models, teams often go their own way in implementing processes.

To really drive business transformation, you need a real-time understanding of your current processes.

This is where Celonis Process Intelligence comes in.

Business and operating model in harmony

Our platform combines market-leading Process Mining, Business Process Management (BPM), and AI under one roof.

It provides real-time insights into your process flows across departments, teams, and systems, and valuable business context to understand which actions you should prioritize with a view to your company goals.

Process Intelligence:
BPM, Process Mining, and AI in one platform

Manage target processes

Create and share process models using AI and enrich them with specific business context.

Understand current processes

Create real-time visibility of your current processes across systems, departments, and applications.

Democratize process knowledge

Empower users to share expertise and streamline processes together.

With Celonis for Business Process Management, you can

Promote Process Excellence
Only enact the changes that bring you real value

Understand processes in real time
Model, analyze, optimize, and automate your processes faster and better than ever, thanks to AI and real-time process data.

Share process knowledge
Increase productivity and actively engage users, whether it's for compliance or optimization.

Take smart action
Improve your process documentation with real-time data and AI-based optimization recommendations.

Drive transformations
Actively involve your employees in your change management

Increase agility
Create maximum transparency and clear responsibilities in order to respond quickly and efficiently to evolving requirements.

Understand existing technology
Understand how teams use your systems and applications and bring user behavior and business requirements into harmony.

Live and breathe active communication
Provide teams with the correct information so they can do their jobs better and manage change initiatives effortlessly.

For the leading medical technology company, Karl Storz, a shared understanding of processes is pivotal to the company's success. With Celonis, the company combines real-time insights into complex and isolated processes with unified process modeling in a single solution. The result: consistent process transparency, better communication, and an efficiency boost for more than 800 processes.

"Thanks to the E2E process view in the Process Cockpit, we can easily identify potential as well as bottle-necks. This makes a huge difference within our Process Excellence initiatives."
