

Legal status

On our product pages is indicated whether a product is licensed (authorized) or supplied as an unlicensed medicine. Under Authorisation the applicable license numbers are included.

When a medicine is licensed in the Netherlands (authorisation number starts with NL-RVG) and supplied outside the Netherlands, it is considered to be an unlicensed medicine in the country of the recipient.

Falsified Medicines Directive

Products that are licensed in an EU country need to comply with the Falsified Medicines Directive. For these products we include a datamatrix code with an unique serial number on the packs and a tamper evident seal. Before exporting these packs to a country outside the EU, the packs need to be decommissioned. A decommission surcharge for these products might apply.
