

EC FERTILISER

Magnesium Sulphate with micro-nutrients 15+31

15 % MgO, water-soluble magnesium oxide (= 9 % Mg)

31 % SO₃, water-soluble sulphur trioxide (= 12.4 % S)

0.9 % B, water-soluble boron

1 % Mn, water-soluble manganese

Chemical Analysis:

	<u>typical</u>
• Magnesium Sulphate Heptahydrate (MgSO ₄ ·7H ₂ O), calculated as MgSO ₄	45.5 %
• Water of crystallisation (H ₂ O)	46.5 %
• Boric Acid (H ₃ BO ₃)	5.1 %
• Manganese Sulphate (MnSO ₄)	2.8 %
• K ₂ SO ₄ , CaSO ₄ , KCl, NaCl	0.1 %

Granulometry:

	<u>typical</u>
• < 1 mm	70 %
• d ₅₀	0.75 mm

Dissolving properties:

- readily soluble, practically without residues; always vigorously stir the salt into water or solution
- the pH value is lowered by up to two units starting from a neutral water quality
- maximum solubility in 100 litres of water: abt. 60kg at 5°C and abt. 80kg at 20°C

Storage:

- Bulk Density ca. 1,000 kg/m³

Store at a cool and dry place. Excessive storage pressure and large temperature fluctuations can result in caking, which can be broken up by pounding of the bags.

Application:

5 kg EPSO Microtop[®] per 100 l water is preferably used as a foliar fertiliser for higher yields and better quality. EPSO Microtop[®] eliminates latent magnesium, sulphur, boron and manganese deficiencies quickly and successfully.

When mixed with any plant protection products, the recommendations of the manufacturers of these products have to be followed.
