

Dear _____

We are looking for enthusiastic parents and guardians to volunteer to help us run our Code Club. Would you like to get involved as a mentor?

What is Code Club?

Code Club is a global movement that inspires young people to get excited about computing and digital making and develops their confidence to create with digital technologies.

Code Club is a part of the Raspberry Pi Foundation, an educational charity with a global mission to help young people realise their full potential through the power of computing and digital technologies.

How Code Club works

Code Club provides free coding projects with step-by-step instructions. The projects cover programming languages such as Scratch, HTML/CSS, and Python.

Code Club members use our projects to have fun creating games, animations, and websites while they learn key programming concepts. Code Clubs also help the young creators develop vital life skills such as collaboration, resilience, creativity, and problem-solving.

How you can help

You can volunteer alone or as part of a team at your local Code Club to:

- Support young creators during sessions. Don't worry if you have no coding experience, as all our project instructions are beginner-friendly. You just need to be enthusiastic about guiding young people to solve problems and willing to learn about coding alongside your Code Club members.
- Help promote the Code Club, set up and clear away equipment, and communicate with other parents/guardians.

How you benefit

- You will have access to a wide range of valuable resources and support offered by the Raspberry Pi Foundation.
- You can build your coding and programming skills through free online Scratch, Python, and web design and development courses.
- You will join a global community of mentors who help young people grow their coding literacy.

If you enjoy working with young people and want to make a difference in their lives by supporting Code Club as a mentor, then please contact:

_____ on _____

Best regards,
