{code club}

Setting up a Raspberry Pi Foundation account for your child

Dear _____

We hope your child is looking forward to attending Code Club, where they will develop coding skills to create games, animations, and many other fun things.

At Code Club, your child will learn to code using a range of free applications. One of these is the Raspberry Pi Foundation's Code Editor, which lets young people code with languages such as Python, HTML, and CSS. Your child will also complete a variety of exciting projects from our projects site.

We would like your child to be able to save any work they do in the Code Editor and on the projects site. To do this, they will need access to a Raspberry Pi Foundation account. If they are 13 or older, they can create an account themselves. If they are under 13, you will have to sign up for an account with them, as follows:

1. Go to projects.raspberrypi.org
2. In the top right corner, click on 'Log in'.
3. On the login screen, click on 'Create one' — this is at the bottom of the box in the middle of the screen.
4. On the next screen, click on 'Under 13'.
5. Fill in the details with **your own email address** and a username for your child. Do not use their real name for this.
6. Fill in the other information and make note of the username and password.
7. Verify the account by clicking the link in the email that will be sent to the address you provided.

Please ensure that your child has the username or email address along with the password so they can log in during their Code Club session. Please be aware that we will not be able to reset their password for them, should they forget it.

Thank you,

_____

Club leader at _____ Code Club.
