

Our story

Created in 2021, Teréga Solutions is a subsidiary of Teréga.

Teréga is a true accelerator of energy transition and for more than 80 years has deployed its exceptional expertise in the development of energy transport and storage infrastructures and now designs innovative solutions to address the major energy challenges for France and Europe.

Teréga Group has diversified its activities through its subsidiary, Teréga Solutions, to promote renewable and low-carbon energy sources and projects that support the territories of tomorrow, particularly by assisting industrial clients in their decarbonisation efforts.

project together

TERĒGA
SOLUTIONS

Driving the growth of industrial decarbonisation

TERēga
SOLUTIONS

As a committed player in the energy and environmental transition, with longstanding industrial expertise in the development and operation of gas transport grids and storage sites, our mission is to accelerate the CCUS value chain (carbon capture, utilisation and storage), enabling industry to access effective decarbonisation solutions to address the challenges of climate change.

With the progressive phase-out of free CO₂ emission allowances and the need for emitting industries to adopt solutions that are more cost-effective than paying carbon taxes, we have developed tailored offerings for different sectors, allowing industrial emitters to decarbonise more competitively.

Our ambition

To become a trusted partner in **conceiving, designing and building** your decarbonisation project.

Our decarbonisation support offering

We act on your behalf to conduct the studies needed for the optimal techno-economic framework for your project:

- We provide expertise and advisory support to build your project's business model, supplying economic insights across the entire CO₂ value chain to support your decision-making.
- For biogenic CO₂ emitters, we identify the most effective utilisation opportunities: generation of tradable negative carbon credits (CDR) or direct sale of CO₂ to e-molecule producers (green chemistry or low-carbon fuels).
- We support industrial clients in securing financing for their decarbonisation projects.

We offer solutions based on proven and appropriate technologies to capture, transport, store or recover CO₂.

Integrated logistics offering:

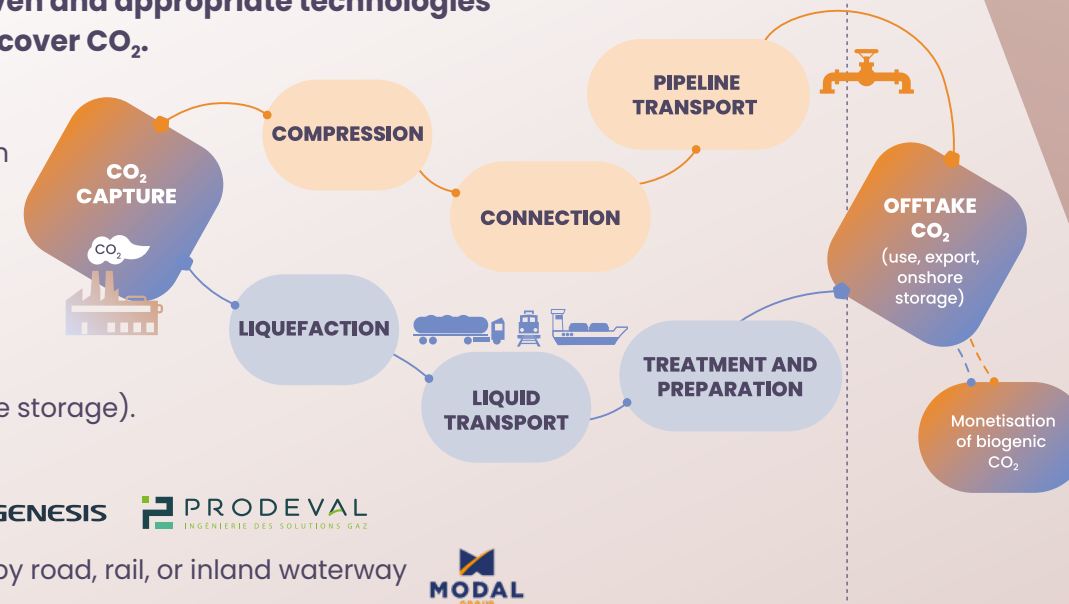

CO₂ capture and pipeline connection to shared transport and storage infrastructure.

Flexible logistics offering:

CO₂ capture, liquefaction and transport by truck, rail or barge to offtake points (use, export or onshore storage).

Flexible logistics offering:

- CO₂ capture and liquefaction
- Conditioning and transport of CO₂ by road, rail, or inland waterway

Why start decarbonising your operations?

- Meet regulatory requirements.
- Safeguard the future competitiveness of your industrial sites.
- Enhance your company's image and reputation.

Why trust us?

- We leverage Group expertise as a developer, operator of infrastructure, and gas logistics provider.
- We provide end-to-end support across the CCUS value chain through a single point of contact.
- We can offer you fully independent technical solutions tailored to your needs and sites.
- We work with recognised partners for CO₂ capture, liquefaction and local logistics.
- We secure the most suitable offtake solutions for your CO₂.
