

Teréga Solutions and MODAL GROUP strengthen their partnership to develop off-pipeline CO₂ transport solutions

Teréga Solutions and MODAL GROUP are strengthening their partnership to offer industrial players looking to decarbonize their activities CO₂ transport solutions by road, rail, or waterway, when pipeline transport is not suitable for their project. This offer is specifically aimed at industrial sites located far from future major CO₂ transport infrastructure or whose considered CO₂ emission volumes do not justify a pipeline connection.

A light logistics offer adapted to decarbonization projects

Teréga Solutions is developing a service offering designed to support CO₂ producers and consumers in implementing their decarbonization projects. In this context, the company relies on MODAL GROUP's expertise in intermodal transport to study the technical and economic feasibility of off-pipeline CO₂ transport solutions and their integration into a complete supply chain.

The ambition is to **design, for each project, the most relevant supply chain based on volumes, site location, available infrastructure, and CO₂ destination (storage or utilization)**. This approach integrates infrastructure needs, operational and regulatory constraints, as well as economic parameters associated with CO₂ transport from the upstream phases of projects.

"The development of CO₂ capture, utilization, and storage value chains requires concrete answers to the question of its transport. Not all configurations justify using a pipeline. With MODAL GROUP, we are strengthening our capacity to offer industrial companies light logistics solutions tailored to their volumes, location, and project-specific constraints."

Carolle Foissaud, President of Teréga Solutions

Complementary expertise serving a complete supply chain

The two partners intend to combine their expertise to build technical and economic solutions tailored to the needs of project developers, from analyzing CO₂ characteristics and volumes to be transported to defining the supply chain, necessary equipment, and associated transport costs.

Studies can thus cover all components required to implement an off-pipeline transport solution: storage of liquefied CO₂, loading and unloading equipment, flow organization, choice of transport mode(s), and sizing of necessary infrastructure.

"CO₂ logistics is an essential link in the industrial decarbonization chain. This partnership with Teréga Solutions allows us to put our expertise in transport and intermodal solutions at the service of structuring projects and to build, on a case-by-case basis, the most relevant logistics schemes."

Bernard Meï, CEO and Founder of MODAL GROUP

A strengthened partnership in Nouvelle-Aquitaine and Occitanie

The strengthening of this collaboration is also reflected in reciprocal exclusivity for transport and conditioning feasibility studies for CO₂ within this light logistics activity in Nouvelle-Aquitaine and Occitanie.

Through this partnership, Terega Solutions and MODAL GROUP aim to facilitate the emergence of CO₂ supply chains tailored to industrial and territorial realities and provide project developers with a complementary or transitional solution to pipeline transport.

About MODAL GROUP

Founded in 2002 by Bernard Meï, current President, MODAL GROUP is building an ecosystem dedicated to decarbonized multimodal logistics. The MODALIS brand remains the Group's benchmark for renting intermodal equipment. Recognized in 2024 and 2025 as a "Growth Champion" by Les Échos, MODAL GROUP now brings together 290 employees across 9 countries, operates a fleet of 8,000 TEUs and 2,000 intermodal wagon platforms, and achieves a consolidated revenue of approximately 120 million euros. About Terega Solutions

Terega Solutions is a subsidiary of Terega. A true accelerator of the energy transition, Terega has for over 80 years deployed exceptional expertise in developing gas transport and storage infrastructure and today designs innovative solutions to meet major energy challenges in France and Europe. Terega Group's shareholding consists of Snam SpA, Enagas, Ouestgaz SAS (EDF Invest), Predica SA (CAA), and Crédit Agricole Assurances Retraite (CAA).
